

- o **Redshift** – light moves towards red end of the spectrum

Speed of Galaxies

- **Speed** of galaxies AND amount by which light from a galaxy is **red-shifted**...
 - o ...may be determined by measuring the **change in wavelength** of light coming from that galaxy

$$\frac{\text{change in wavelength}}{\text{reference wavelength}} = \frac{\text{velocity of a galaxy}}{\text{speed of light}}$$

$$\frac{\lambda - \lambda_0}{\lambda_0} = \frac{\Delta\lambda}{\lambda_0} = \frac{v}{c}$$

- λ_0 = the wavelength of light for a **stationary observer** (reference wavelength, measured in lab) → when it was **emitted** BEFORE it was **red-shifted**
- λ is the **measured wavelength**
- $\Delta\lambda$ is the **change in wavelength**
- **speed of light** = 3.00×10^8 m/s

Speed of Galaxy related to its distance

- Hubble discovered that the **speed of a galaxy is proportional to its distance from us**

8.17P describe the red-shift in light received from galaxies at different distances away from the Earth

The Red-shift of GALAXIES

- The light coming to us from distant galaxies is **redshifted** (they are moving AWAY from us)

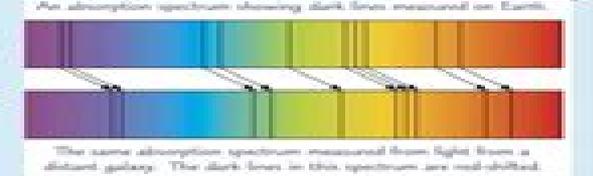

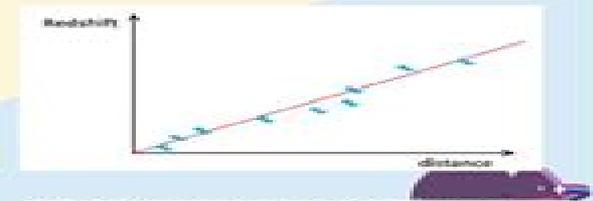

Hubble's LAW

- Furthermore, the **greater the distance** to the galaxy, the **greater the redshift**
 - o The **more distant galaxies** are moving away from us **faster**

Light from Galaxies is RED-SHIFTED

Most **galaxies** seem to be **moving away** from each other, because:

1. Different elements **absorb** different **frequencies** (OR wavelengths) of light
2. When light is passed through a sample of an element, a **pattern of dark lines** is produced – with a dark line at each of the **frequencies** in the visible part of the EM spectrum that the **element absorbs**
3. When we look at **light from distant galaxies**, we see the SAME patterns BUT at **slightly lower frequencies** (and so lower wavelengths) than they should be
4. Patterns have been **shifted** towards the **red end** of the spectrum – **red-shift**

8.18P explain why the red-shift of galaxies provides evidence for the expansion of the universe

- Measurements of the red-shift suggest that **All the distant galaxies** are MOVING AWAY from Earth very quickly – same result in whichever direction you look in
