2-1 Processing the Crime Scene

- Physical evidence is the keystone for crime labs.
- Physical evidence encompasses any and all objects that can establish that a crime has been committed or can provide a link between a crime and its victim or a crime and its perpetrator.
- The presence of physical evidence must first be recognized at the crime scene for it to be used effectively.
- Crime labs do not solve crimes, but enhance the ability of police officers to have successful outcomes for their criminal investigations.
- Forensic science begins at the crime scene.
- The investigator must be able to recognize physical evidence and properly preserve it for lab examination, or it will be useless.
- Crime-scene investigation techniques are not difficult to master and are easy enough for the average police officer to perform.
- A crime scene is processed in a certain order:
 - **SECURE & ISOLATE THE CRIME SCENE**
 - The first officer to arrive at the scene is responsible for securing the crime scene, seeing if anyone needs medical assistance, and arresting the perpetrator.
 - The highest priority must be made to exclude all unauthorized personnel from the scene to avoid destruction or contamination of evidence. Barricades, ropes, and police tape are often used, along with police guards.
 - **RECORD THE CRIME SCENE**
 - Once the scene is secured, the preliminary exam must begin. Recording of the crime scene becomes a critical piece to the investigation process, and the opportunity to record the scene in its original state must not be lost.
 - Investigators have only a limited amount of time to work a crime site in its untouched state.
 - The opportunity to permanently record the scene in its original state must not be lost.
 - Such records will not only prove useful during the subsequent investigation but are also required for presentation at a trial in order to document the condition of the crime site and to delineate the location of physical evidence.
 - Every step of the investigation should be documented thoroughly with an appropriate method.
 - Documentation of the crime scene is required for presentation as evidence at trial and to show where the physical evidence was found.
 - Photography, sketches, and notes are the three methods for crime-scene recording, and all three should be used when budget and personnel allow.
 - Photography
 - * A crime scene must be in an unaltered condition before being photographed. Nothing must be moved until it has been photographed from all necessary angles or it may not be admissible at trial. (The only

Failed Evidence David A. Harris, 2012-09-03 With the popularity of crime dramas like CSI focusing on forensic science and increasing numbers of police and prosecutors making wide spread use of DNA high tech science seems to have become the handmaiden of law enforcement But this is a myth asserts law professor and nationally known expert on police profiling David A Harris In fact most of law enforcement does not embrace science it rejects it instead resisting it vigorously The question at the heart of this book is why Eyewitness identifications procedures using simultaneous lineups showing the witness six persons together as police have traditionally done produces a significant number of incorrect identifications Interrogations that include threats of harsh penalties and untruths about the existence of evidence proving the suspect s guilt significantly increase the prospect of an innocent person confessing falsely Fingerprint matching does not use probability calculations based on collected and standardized data to generate conclusions but rather human interpretation and judgment Examiners generally claim a zero rate of error an untenable claim in the face of publicly known errors by the best examiners in the U S *Failed Evidence* explores the real reasons that police and prosecutors resist scientific change and it lays out a concrete plan to bring law enforcement into the scientific present Written in a crisp and engaging style free of legal and scientific jargon *Failed Evidence* will explain to police and prosecutors political leaders and policy makers as well as other experts and anyone else who cares about how law enforcement does its job where we should go from here Because only if we understand why law enforcement resists science will we be able to break through this resistance and convince police and prosecutors to rely on the best that science has to offer Justice demands no less

Developing a Strategy for a Multiagency Response to Clandestine Drug Laboratories, 1993 *Expert Evidence and Scientific Proof in Criminal Trials* Paul Roberts, 2017-07-05 Forensic science evidence and expert witness testimony play an increasingly prominent role in modern criminal proceedings Science produces powerful evidence of criminal offending but has also courted controversy and sometimes contributed towards miscarriages of justice The twenty six articles and essays reproduced in this volume explore the theoretical foundations of modern scientific proof and critically consider the practical issues to which expert evidence gives rise in contemporary criminal trials The essays are prefaced by a substantial new introduction which provides an overview and incisive commentary contextualising the key debates The volume begins by placing forensic science in interdisciplinary focus with contributions from historical sociological Science and Technology Studies STS philosophical and jurisprudential perspectives This is followed by closer examination of the role of forensic science and other expert evidence in criminal proceedings exposing enduring tensions and addressing recent

controversies in the relationship between science and criminal law A third set of contributions considers the practical challenges of interpreting and communicating forensic science evidence This perennial battle continues to be fought at the intersection between the logic of scientific inference and the psychology of the fact finder s common sense reasoning Finally the volume s fourth group of essays evaluates the limited success of existing procedural reforms aimed at improving the reception of expert testimony in criminal adjudication and considers future prospects for institutional renewal with a keen eye to comparative law models and experiences success stories and cautionary tales
