Notes on Tchebycheff Polynomials James Shohat, 1960 **Polynomial Expansions of Analytic Functions** Ralph P. Jr. Boas, R.C. Buck, 2012-12-06 This monograph deals with the expansion properties in the complex domain of sets of polynomials which are defined by generating relations It thus represents a synthesis of two branches of analysis which have been developing almost independently On the one hand there has grown up a body of results dealing with the more or less formal properties of sets of polynomials which possess simple generating relations Much of this material is summarized in the Bateman compendia ERDELYI 1J vol III chap 19 and in TRUESDELL 1J On the other hand a problem of fundamental interest in classical analysis is to study the representability of an analytic function $f(z)$ as a series $\sum C_n P_n(z)$ where P_n is a prescribed sequence of functions and the connections between the function f and the coefficients c_n BIEBERBACH S mono graph Analytische Fortsetzung Ergebnisse der Mathematik new series no 3 can be regarded as a study of this problem for the special choice $P_n(z) = z^n$ and illustrates the depth and detail which such a specialization allows However the wealth of available information about other sets of polynomials has seldom been put to work in this connection the application of generating relations to expansion of functions is not even mentioned in the Bateman compendia At the other extreme J M
