Chem Worksheet 15-1

Name _____

Many ionic compounds will dissolve in water so we say they are **soluble**. Sodium chloride (NaCl), and potassium nitrate (KNO₃) are two examples of soluble compounds. When these compounds are mixed with water they dissolve, and we describe them as **aqueous** (aq). There are many ionic compounds that do not dissolve in water, though. These are described as **insoluble**. An insoluble substance simply remains in the solid state (s) when added to water. The chart below can be used to predict whether the compounds are soluble or insoluble.
