features of Feyerebend's work and offers a more nuanced understanding than reviews and considers its reception in the science education and philosophy of science literature. This is a valuable contribution to scholarship about Feyerebend with the potential to inform further research as well as science education practice. David Geelan Griffith University Australia

Introduction to Classical Mechanics Jain, Pushpendra K., Nkoma, John S., 2019-05-22 This book introduces Tanzanian students to the fascinating world of Mechanics the science of motion and equilibrium. Concepts of mechanics namely vector and scalar quantities forces the laws of motion work energy the conservation laws gravitation circular orbital and oscillatory motions cut across not only most branches of physics such as electromagnetism atomic molecular nuclear astro and space physics but are also applied to most branches of engineering and technology. This makes mechanics an important component of physics which students must master well at an early stage before branching to various career options. That is why undergraduate programs in sciences at most universities offer mandatory courses on basic mechanics within the first year of study. This book meets the needs of students and academics at the entry level courses. This book covers three crucial subareas of mechanics namely Kinematics Newtonian mechanics and Lagrangian mechanics. Chapter 1 covers introductory aspects Kinematics is discussed in chapter 2 Newton's laws of motion are introduced in chapter 3 Chapter 4 deals with the conservation of linear momentum Work energy and power are covered in chapter 5 Circular motion Gravitation and planetary motion and oscillations are covered in chapters 6 7 and 8 respectively Chapter 9 presents the aspects of rigid body dynamics and Lagrangian mechanics is introduced in chapter 10 which lays a foundation for advanced courses in mechanics. The language of physics is universal and the book is suited to students globally. However the book recognises and addresses the specific needs of students in African Universities. There is a marked heterogeneity in the background of students ranging from those who are well prepared to those who are not so well prepared. The book meets the needs of all students. It presents detailed explanations of difficult to grasp topics with the help of simple but clearly drawn and labeled diagrams. The discussions and conclusions are presented point wise and key words definitions laws etc are highlighted. A unique feature of the book is a number of Recipes which give students tailor made guidance to problems solving. Application of the recipe is illustrated by a solved example followed by a similar exercise for students to practice. There are a large number of problems and exercises at the end of each chapter to further sharpen their skills.
