Flügge, 1962-01-11 will be asymptotically integrable that is to say if we displace a vector parallel to itself along a closed curve whose total length is proportional to r then as we remove the curve to infinity the change of the vector that results from the circuit about the curve will tend to zero In the presence of gravitational radiation the total energy will not be conserved because the waves carry some energy with them analogous statements apply to the linear momentum etc But that is not all if there is no coordinate 2 system in which the field strengths drop off as $1/r$ then there is no possibility to generate out of one vector at infinity a whole field of parallel vectors at infinity Thus we are unable in the presence of radiation to define even at infinity a rigid displacement the type of coordinate transformation that is presumably generated by the energy integral Under these circumstances it is very difficult to see how one can define the free vector energy linear momentum in a convincing manner These ambiguities of course do not imply that general relativity lacks quantities that obey equations of continuity rather general relativity suffers in this respect from an *embarras de richesse* There is an infinity of such quantities and our difficulty is to single out a subset and to present these as the natural expressions for energy linear momentum etc

Electromagnetism** James Clerk Maxwell, 1892 *Principles of Quantum Electrodynamics* Walter E. Thirring, 2013-10-22 *Principles of Quantum Electrodynamics* concentrates on one of the best understood parts of quantum field theory quantum electrodynamics It emphasizes the physical basis of the theory and avoids purely mathematical details For this reason the book should not be taken as a handbook of field theory but rather as a compendium of the most

characteristic and interesting results which have been obtained up to now The book is organized into four parts Part I develops the general mathematical framework covering units and orders of magnitude classical electrodynamics and the general formalism of the quantum theory of fields Part II deals with free fields It examines some problems concerning the physical interpretation of the theory and asks whether the quantization procedure adopted actually introduces quantum characteristics and if so how these are expressed by the formalism It also investigates the expectation values of more complicated expressions Part III examines the effects of a mechanism which produces the particles under consideration i e an external source of the fields Part IV deals with quantum fields in interaction The focus is on the case of a quantized electromagnetic field the source of which is a quantized Dirac field
