Version 0.51. Cisco Internal Use Only.

Jeremy Lawrence, Multiservice Switching Business Unit

## Note on Versions

This document is for Cisco Internal Use Only. An shorter Cisco Confidential version with some sensitive content removed is (or will soon be) available from "IP+ATM Solutions" page at <http://www.win.cisco.com/omc/cc/cisco/mkt/wan/ipatm/index.htm>. The Cisco Confidential version (but not this version) may be released to Service Provider customers under a Non-Disclosure Agreement.

## Outline

Multiprotocol Label Switching (MPLS) extends the capabilities of IP routers and ATM switches in several key ways:

- It fully integrates IP Routing control with ATM switches, providing native support of IP services such as IP Class of Service and IP Multicast on ATM switches as well as routers.
- It provides support for scalable and flexible IP Virtual Private Network (VPN) services on both switches and routers.
- It provides support for IP Traffic Engineering, which is the fine-grained adjustment of IP traffic flows according to the resources in a network.

This version of *Designing ATM MPLS Networks* concentrates on the fundamentals of ATM MPLS network design. These fundamentals apply to all ATM MPLS networks, irrespective of the services being offered on them:

- Choosing MPLS equipment
- IP+ATM concepts and equipment
- Designing and dimensioning ATM MPLS points of presence
- Dimensioning MPLS network links
- IP routing in ATM MPLS networks
- Dimensioning MPLS Label VC requirements
- Ongoing network design
- Migrating ATM networks to MPLS

## Open Issues

### Specific Comments & Errata

- 3.1: In Figure 4c it's not clear that the data flow is CPE -- MGX -- eLSR -- MPLS cloud. A revised version of the diagram would make this clearer.
- 3.4: The equations are either correct or "safe" over-estimates. However some slightly tighter limits apply to the edge LSRs in networks with switches which use unpaired cross-connects, namely the LS1010, 6400 and 8540 MSR. These should be mentioned.
