Remote Sensing Floyd F. Sabins, Jr., James M. Ellis, 2020-04-01 Remote sensing has undergone profound changes over the past two decades as GPS GIS and sensor advances have significantly expanded the user community and availability of images. New tools such as automation, cloud based services, drones, and artificial intelligence continue to expand and enhance the discipline. Along with comprehensive coverage and clarity, Sabins and Ellis establish a solid foundation for the insightful use of remote sensing with an emphasis on principles and a focus on sensor technology and image acquisition. The Fourth Edition presents a valuable discussion of the growing and permeating use of technologies such as drones and manned aircraft, imaging, DEMs, and lidar. The authors explain the scientific and societal impacts of remote sensing, review digital image processing and GIS, provide case histories from areas around the globe, and describe practical applications of remote sensing to the environment, renewable and nonrenewable resources, land use, land cover, natural hazards, and climate change. *Remote Sensing Digital Database* includes 27 examples of satellite and airborne imagery that can be used to jumpstart labs and class projects. The database includes descriptions, georeferenced images, DEMs, maps, and metadata. Users can display, process, and interpret images with open source and commercial image processing and GIS software. Flexible, revealing, and instructive, the *Digital Image Processing Lab Manual* provides 12 step-by-step exercises on the following topics: an introduction to ENVI, Landsat multispectral processing, image processing band ratios and principal components, georeferencing, DEMs and lidar, IHS and image sharpening, unsupervised classification, supervised classification, hyperspectral, and change detection and radar. Introductory and instructional videos describe and guide users on ways to access and utilize the *Remote Sensing Digital Database* and the *Digital Image Processing Lab Manual*. Answer Keys are available for instructors for questions in the text as well as the *Digital Image Processing Lab Manual*. **LAB PRIMER THROUGH MATLAB®** NAVAS, K.

A. JAYADEVAN, R., 2014-02-19 This systematically designed laboratory manual elucidates a number of techniques which help the students carry out various experiments in the field of digital signal processing, digital image processing, digital signal processor, and digital communication through MATLAB in a single volume. A step-wise discussion of the programming procedure using MATLAB has been carried out in this book. The numerous programming examples for each digital signal processing lab, image processing lab, signal processor lab, and digital communication lab have also been included. The book begins with an introductory chapter on MATLAB which will be very useful for a beginner. The concepts are explained with the aid of screenshots. Then it moves on to discuss the fundamental aspects in digital signal processing through MATLAB with a special emphasis given to the design of digital filters, FIR and IIR. Finally, digital communication and image processing sections in the book help readers to understand the commonly used MATLAB functions. At the end of this book, some basic experiments using DSP trainer kit have also been included. Audience: This book is intended for the undergraduate students of electronics and communication engineering, electronics and instrumentation engineering, and instrumentation and control.
