molecular studies and real world applications in a form attractive not only to specialists in the realm of fundamental research
but also to breeders and plant producers Four sections deal with the control of development the control of stress tolerance
the control of metabolic activity and novel additions to the toolbox of modern plant cell biology in an exemplary and
comprehensive manner and are targeted at a broad professional community It serves as a clear example that a sustainable
solution to the problems of food security must be firmly rooted in modern continuously self re evaluating cell biological
research No green biotech without green cell biology As advances in modern medicine is based on extensive knowledge of
animal molecular cell biology we need to understand the hidden laws of plant cells in order to handle crops vegetables and
forest trees We need to exploit not only empirically their astounding developmental physiological and metabolic plasticity
which allows plants to cope with environmental challenges and to restore flexible but robust self organisation
