### Criminalistics: An Introduction to Forensic Science

#### Arrival at the Crime Scene

- Upon arrival at a crime scene the first responding officer to a crime scene is responsible for:
  1. Acquiring medical assistance for injured victims
    - Medical personnel avoid disturbing evidence and approach the victim by an indirect route
    - Usually called preservation of life
  2. Detaining any potential suspects or witnesses
    - Statements are taken from victims, witnesses, and suspects
  3. Securing the crime scene to the greatest extent possible
    - The boundary is sealed off, and guards are posted at the entry to the crime scene if needed
    - All civilians and unauthorized personnel are excluded from the crime scene
  4. Calling for any additional personnel needs such as other officers and/or forensic investigators
    - The personnel required depends upon the nature of the crime scene

#### Securing the crime scene

- The boundaries of the crime scene must be secured w/ crime scene tape, ropes, or cones
- The secure area should include the area where the crime took place and the surroundings area where physical evidence may be located
- Once the boundaries are secured, guards may be posted to restrict access to the crime scene
- A detailed log is kept of personnel movements in and out of the crime scene. This log included personnel names and time of entry and exit
- Goal is to be able to keep the crime scene as perfect as possible
- Investigators should never do anything that might alter the crime scene (e.x. smoking, eating, drinking, or littering)
- The search for physical evidence at a crime scene must be thorough and systematic
- The search pattern selected will normally depend on the size and locale of the scene and the number of collectors participating in the search
- For a factual, unbiased reconstruction of the crime, the investigator, relying upon his or her training and experience, must not overlook any pertinent evidence
- Physical evidence can be anything from massive objects to microscopic traces

- Examples of physical evidence:

*Failed Evidence* David A. Harris, 2012-09-03 With the popularity of crime dramas like CSI focusing on forensic science and increasing numbers of police and prosecutors making wide spread use of DNA high tech science seems to have become the handmaiden of law enforcement But this is a myth asserts law professor and nationally known expert on police profiling David A Harris In fact most of law enforcement does not embrace science it rejects it instead resisting it vigorously The question at the heart of this book is why Eyewitness identifications procedures using simultaneous lineups showing the witness six persons together as police have traditionally done produces a significant number of incorrect identifications Interrogations that include threats of harsh penalties and untruths about the existence of evidence proving the suspect s guilt significantly increase the prospect of an innocent person confessing falsely Fingerprint matching does not use probability calculations based on collected and standardized data to generate conclusions but rather human interpretation and judgment Examiners generally claim a zero rate of error an untenable claim in the face of publicly known errors by the best examiners in the U S *Failed Evidence* explores the real reasons that police and prosecutors resist scientific change and it lays out a concrete plan to bring law enforcement into the scientific present Written in a crisp and engaging style free of legal and scientific jargon *Failed Evidence* will explain to police and prosecutors political leaders and policy makers as well as other experts and anyone else who cares about how law enforcement does its job where we should go from here Because only if we understand why law enforcement resists science will we be able to break through this resistance and convince police and prosecutors to rely on the best that science has to offer Justice demands no less

controversies in the relationship between science and criminal law A third set of contributions considers the practical challenges of interpreting and communicating forensic science evidence This perennial battle continues to be fought at the intersection between the logic of scientific inference and the psychology of the fact finder s common sense reasoning Finally the volume s fourth group of essays evaluates the limited success of existing procedural reforms aimed at improving the reception of expert testimony in criminal adjudication and considers future prospects for institutional renewal with a keen eye to comparative law models and experiences success stories and cautionary tales
