O. Svensson,1988 This paper examines portfolio choice and asset pricing when some assets are nontraded for instance when a country cannot trade claims to its output on world capital markets when a government cannot trade claims to future tax revenues or when an individual cannot trade claims to his future wages The close relation between portfolio choice with and implicit pricing of nontraded assets is emphasized A variant of Cox Ingersoll and Ross s Fundamental Valuation Equation is derived and used to interpret the optimal portfolio Explicit solutions are presented to the portfolio and pricing problem for some special cases including when income from the nontraded assets is a diffusion process not spanned by traded assets and affected by a state variable **Asset Pricing at the Millenium** John Y. Campbell,2000 **Portfolio Selection and Asset Pricing** Shouyang Wang,Yusen Xia,2002-02-25 This monograph consists of two parts One part is portfolio selection theory and the other part is capital asset pricing theory For each part a comprehensive review of the original theory efforts to improve the theory afterwards and future works to be done are presented Some innovative models and empirical research

works are given in subsequent chapters following the review. For example, a model for portfolio selection with order of expected returns is presented in Chapter 2; the model addresses the inaccuracy in the estimation of the expected returns of securities by putting the expected returns of securities as variables rather than known constants. Readers will see some new results which are very practical and interesting.

Macroeconomics and Imperfect Competition Jean-Pascal Bénassy, 1995. The macroeconomics of imperfect competition is a field which has witnessed an almost exponential growth in the last twenty years. The reason for this success is simple as this field combines two important and hitherto incompatible features. On one hand, like Walrasian or new classical macroeconomics, it has fully rigorous microeconomic foundations. On the other hand, like Keynesian macroeconomics, which itself lacked such foundations, it can produce underemployment of resources and macroeconomic coordination failures. This successful blend of the General Equilibrium Keynesian and Imperfect Competition traditions has become a most influential paradigm in macroeconomics. Jean-Pascal Bénassy himself, the author of several pioneering contributions, has assembled leading articles in the field and written an extensive introduction putting them and other contributions in the area into perspective. This volume will be a basic reference source for professors, students, and researchers in this important and rapidly expanding field.

Asset Pricing and Portfolio Performance Robert A. Korajczyk, 1999. A comprehensive reference work presenting an original framework for evaluating observed differences in returns across assets.
