

## Solutions for Assignment # 3

by Dru Renner

### Problem 3.1

Let the mass of the particle be  $m = 6.0$  kg. The two forces (measured in Newtons) acting on it are

$$\vec{F}_1 = 2\hat{x} - 5\hat{y} + 3\hat{z} \quad \text{and} \quad \vec{F}_2 = -4\hat{x} + 8\hat{y} + \hat{z}$$

(a) The net force is the vector sum of the two vectors.

$$\vec{F}_{\text{net}} = \vec{F}_1 + \vec{F}_2 = -2\hat{x} + 3\hat{y} + 4\hat{z}$$

(b) The acceleration follows from Newton's Second Law.

$$\vec{a} = \frac{1}{m}\vec{F}_{\text{net}} = -\frac{1}{3.0}\hat{x} + \frac{1}{2.0}\hat{y} + \frac{2}{3.0}\hat{z}$$

The magnitude of acceleration is given by

$$|\vec{a}| = \frac{1}{6.0}\sqrt{29} \approx 0.90 \text{ m/s}^2$$

Note that the mass was given as  $m = 6.0$  kg and we were told that the force was given in units of Newtons, so simply "plugging" in the numbers will give an answer in units of  $\text{m/s}^2$ .

### Problem 3.2

Let  $\alpha = 120^\circ$  be the opening angle,  $T_1$  be the tension in the upper half of the string,  $T_2$  be the tension in the lower half of the string, and  $F = 180$  N be the force the archer exerts on the bow string. Note the archer pulls at the middle of the string so the picture below is symmetric.

**Introduction To Classical Mechanics: Solutions To Problems** John Dirk Walecka, 2020-08-24 The textbook Introduction to Classical Mechanics aims to provide a clear and concise set of lectures that take one from the introduction and application of Newton's laws up to Hamilton's principle of stationary action and the Lagrangian mechanics of continuous systems An extensive set of accessible problems enhances and extends the coverage It serves as a prequel to the author's recently published book entitled Introduction to Electricity and Magnetism based on an introductory course taught some time ago at Stanford with over 400 students enrolled Both lectures assume a good concurrent course in calculus and familiarity with basic concepts in physics the development is otherwise self contained As an aid for teaching and learning and as was previously done with the publication of Introduction to Electricity and Magnetism Solutions to Problems this additional book provides the solutions to the problems in the text Introduction to Classical Mechanics

**Solved Problems in Classical Mechanics** O. L. de Lange, J. Pierrus, 2010-05-06 Apart from an introductory chapter giving a brief summary of Newtonian and Lagrangian mechanics this book consists entirely of questions and solutions on topics in classical mechanics that will be encountered in undergraduate and graduate courses These include one two and three dimensional motion linear and nonlinear oscillations energy potentials momentum and angular momentum spherically symmetric potentials multi particle systems rigid bodies translation and rotation of the reference frame the relativity principle and some of its consequences The solutions are followed by a set of comments intended to stimulate inductive reasoning and provide additional information of interest Both analytical and numerical computer techniques are used to obtain and analyze solutions The computer calculations use Mathematica version 7 and the relevant code is given in the text It includes use of the interactive Manipulate function which enables one to observe simulated motion on a computer screen and to study the effects of changing parameters The book will be useful to students and lecturers in undergraduate and graduate courses on classical mechanics and students and lecturers in courses in computational physics

should be further sustained The division of the book in two overlapping parts reflects the duality between the physical vision and the mathematical construction The former is represented by tutorial reviews on non commutative geometry on space time discretization and renormalization and on gauge field path integrals The latter one by lectures on cohomology on stochastic geometry and on mathematical tools for the effective action in quantum gravity The book will benefit everyone working or entering the field of quantum gravity research *Proceedings American Society for Engineering Education.
