Research Topics In Petroleum Engineering:

A Research Agenda for Academic Petroleum Engineering Programs. [Final Report]. ,1990 The development of a research agenda should be a direct way of portraying the scope of petroleum engineering of identifying the critical technological issues faced by the profession of elucidating the gaps between the existing research resources and the needs and of outlining a program of research through which the petroleum engineering departments can be collectively of maximum service Such an agenda would be of value to the profession of petroleum engineering to industry and to government agencies as well as to the faculty and students of the petroleum engineering departments The purposes of the activity that led to this report therefore were to develop a statement to serve as a beginning research agenda for the petroleum engineering academic community to bring together representatives of the petroleum engineering academic community to recognize the importance of developing a consensus posture with respect to research and to provide a document that will assist in portraying to industry government agencies and others the problems and needs of the petroleum engineering departments for conducting research Contents of this report include introduction the background the scope of petroleum engineering research priority research topics and technological issues non technological research issues and conclusions and recommendations

Department of Energy,1990 Advancing Subsurface Imaging, Energy Transition and Digital Innovation Numair Ahmed Siddiqui,Berihun Mamo Negash,Syahrir Ridha,Khairul Arifin Mohd Noh,Khaled Abdalla Elraies,2025-12-19 This proceedings presents selected papers from the International Conference on Subsurface Technology ICSsT 2024 held during September 10 11 at the Sabah International Convention Centre Kota Kinabalu Malaysia The book seeks to bring together a diverse collection of research developments in subsurface technology It will cover topics such as subsurface imaging energy transition focusing on rare earth elements and geothermal energy subsurface storage including carbon storage hydrogen storage and hazardous waste management integrating IOR EOR methods with the current energy landscape and field digitalization utilizing machine learning and data analytics The content of the book will appeal to researchers and engineers working in the field of subsurface technology and its applications in the energy sector **Hydraulic fracture geometry characterization based on distributed fiber optic strain measurements** Kan Wu,Yongzan Liu,Ge Jin,Aishwarya Srinivasan,2024-06-05 Fiber optic based measurements are innovative tools for the oil and gas industry to utilize in monitoring wells in a variety of applications including geothermal activity Monitoring unconventional reservoirs is still challenging due to complex subsurface conditions and current research focuses on qualitative interpretation of field data Hydraulic Fracture Geometry Characterization from Fiber Optic Based Strain Measurements delivers a critical reference for reservoir and completion engineers to better quantify the propagation

process and evolution of fracture geometry with a forward model and novel inversion model The reference reviews different fiber optic based temperature acoustic and strain measurements for monitoring fracture behaviors and includes advantages and limitations of each measurement giving engineers a better understanding of measurements applied in all types of subsurface formations Stress strain rate responses on rock deformation are given a holistic approach including guidelines and an automatic algorithm for identification of fracture hits Last a novel inversion model is introduced to show how fracture geometry can be used for optimization on well placement decisions Supported by case studies Hydraulic Fracture Geometry Characterization from Fiber Optic Based Strain Measurements gives today s engineers better understanding of all complex subsurface measurements through fiber optic technology Examine the basics of distributed fiber optic strain measurements Conduct a detailed analysis of strain responses observed in both horizontal and vertical monitoring wells Present a systematic approach for interpreting strain data measured in the field Highlight the significant insights and values that can be derived from the field measured strain dataset Support monitoring and modeling for subsurface energy extraction and safe storage
