

Example 1: Runge-Kutta Method (1 of 2)

- Recall our initial value problem

$$y' = 1 - t + 4y, \quad y(0) = 1,$$

- To calculate y_1 in the first step of the Runge-Kutta method for $h = 0.2$, we start with

$$k_{01} = f(0, 1) = 5; \quad h k_{01} = 1.0,$$

$$k_{02} = f(0 + 0.1, 1 + 0.5) = 6.9; \quad h k_{02} = 1.38,$$

$$k_{03} = f(0 + 0.1, 1 + 0.69) = 7.66; \quad h k_{03} = 1.532,$$

$$k_{04} = f(0 + 0.2, 1 + 1.532) = 10.928.$$

- Thus

$$y_1 = 1 + \frac{0.2}{6} (5 + 2(6.9) + 2(7.66) + 10.928) = 2.5016$$

[Numerical Methods for Engineers and Scientists Using MATLAB®](#) Ramin S. Esfandiari, 2017-04-25 This book provides a pragmatic methodical and easy to follow presentation of numerical methods and their effective implementation using MATLAB which is introduced at the outset The author introduces techniques for solving equations of a single variable and systems of equations followed by curve fitting and interpolation of data The book also provides detailed coverage of numerical differentiation and integration as well as numerical solutions of initial value and boundary value problems The author then presents the numerical solution of the matrix eigenvalue problem which entails approximation of a few or all eigenvalues of a matrix The last chapter is devoted to numerical solutions of partial differential equations that arise in engineering and science Each method is accompanied by at least one fully worked out example showing essential details involved in preliminary hand calculations as well as computations in MATLAB

[Ordinary Differential Equations](#) Charles Roberts, 2011-06-13 In the traditional curriculum students rarely study nonlinear differential equations and nonlinear systems due to the difficulty or impossibility of computing explicit solutions manually Although the theory associated with nonlinear systems is advanced generating a numerical solution with a computer and interpreting that solution are fairly elementary Bringing the computer into the classroom Ordinary Differential Equations Applications Models and Computing emphasizes the use of computer software in teaching differential equations Providing an even balance between theory computer solution and application the text discusses the theorems and applications of the first order initial value problem including learning theory models population growth models epidemic models and chemical reactions It then examines the theory for n th order linear differential equations and the Laplace transform and its properties before addressing several linear differential equations with constant coefficients that arise in physical and electrical systems The author also presents systems of first order differential equations as well as linear systems with constant coefficients that arise in physical systems such as coupled spring mass systems pendulum systems the path of an electron and mixture problems The final chapter introduces techniques for determining the behavior of solutions to systems of first order differential equations without first finding the solutions Designed to be independent of any particular software package the book includes a CD ROM with the software used to generate the

solutions and graphs for the examples The appendices contain complete instructions for running the software A solutions manual is available for qualifying instructors *Practical MATLAB Modeling with Simulink* Sulaymon L.
