# Java Basic Interview Questions

### Q1. What is Java?

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is a widely used language for developing applications for web, mobile, and desktop platforms.

### Q2. What are the features of Java?

Key features of Java include platform independence, object-orientation, security, robustness, simplicity, multithreading support, and garbage collection.

### Q3. What is JVM and why is it important?

JVM stands for Java Virtual Machine, which is the part of the Java Run-time Environment that executes Java byte code. It is important because it provides a platform-independent way of executing Java code.

### Q4. What is the difference between JDK, JRE, and JVM?

JDK (Java Development Kit) is the full software development kit required to develop Java applications, JRE (Java Runtime Environment) is a subset of JDK that is required to run Java applications, and JVM (Java Virtual Machine) is the component of JRE that executes Java bytecode.

### Q5. What is the use of the public static void main(String[] args) method?

This method is the entry point for any Java application. It is the method called by the JVM to run the program.

### Q6. Explain the concept of Object-Oriented Programming in Java.

Object-Oriented Programming (OOP) in Java is a programming paradigm based on the concept of "objects", which can contain data in the form of fields (attributes) and code in the form of procedures (methods). Java uses OOP principles including inheritance, encapsulation, polymorphism, and abstraction.

### Q7. What is inheritance in Java?

Inheritance is a fundamental OOP concept where one class can inherit fields and methods from another class. In Java, inheritance is achieved using the extends keyword.

contain abstract methods methods without a body as well as concrete methods It can also contain instance variables and constructors Subclasses of an abstract class must implement all abstract methods or be declared abstract themselves An interface is a reference type in Java that defines a contract of methods that a class must implement It can only contain constant variables and method signatures without method bodies A class can implement multiple interfaces but can only extend one abstract class What is the difference between Array List and LinkedList in Java Array List is implemented as a dynamic array meaning that it stores elements in a contiguous memory location and supports random access to elements using an index It is efficient for accessing elements by index but less efficient for inserting or removing elements from the middle of the list LinkedList is implemented as a doubly linked list meaning that it stores elements as nodes with references to both the previous and next nodes It is efficient for inserting or removing elements from the middle of the list but less efficient for random access These are just a few examples of Java interview questions Depending on the role and level of the interview questions may cover more advanced topics such as design patterns concurrency memory management and performance optimization It s important to thoroughly prepare for interviews by reviewing core Java concepts practicing coding exercises and gaining hands on experience with Java programming **Cracking the Java Coding Interview** Harry - Anonymous Hacktivist.,2014-07-28 Essential JAVA Interview Skills Made Easy The main objective of this interview book is not to give you just magical interview question tricks I have followed a pattern of improving the question solution with deep Questions Answers explanations with different interview complexities for each interview problem you will find multiple solutions for complex interview questions I mentioned approx 2000 Java Technical Questions and 200 Non Technical Questions for before the technical round This book is world s Biggest Java Interview book you ever read What Special In this book I covered and explained several topics of latest Java 8 Features in detail for Developers Freshers Topics Like Lambdas Java 8 Functional interface Stream and Time API As a job seeker if you read the complete book with good understanding seriously i am 101% sure you will challenge any Interview Interviewers Specially Java in this world and this is the objective of this book This book contains more than Two Thousands Technical Java Questions and 200 Non Technical Questions like before This book is very much useful for I T professionals and the students of Engineering Degree and Masters during their Campus Interview and academic preparations If you read as a student preparing for Interview for Computer Science or Information Technology the content of this book covers all the required topics in full details While writing the book an intense care has been taken to help students who are preparing for these kinds of technical interview rounds Hello Now I want to share something important with you For those of you new to IT Technical or any other job interviews the process can seem overwhelming Interviewers throw questions at you expect you to whip up brilliant algorithms or Program Codes on the spot and then ask you to write beautiful code on a whiteboard luckily everyone else is in the same boat and you re already working hard to prepare Good job So throw the ball back in the interviewer s court Inside Complete Chapters at a Glance 01
