**Action Gravity** Jeff Lee, 2021-02-09 The Cause of Gravity The Holy Grail of all Scientific Revelation For over four centuries now Natural Philosophers and Theoretical Physicists have been desperately searching for the answer to that elusive and intractable question that is still hanging around today What is the true cause of Gravity The present day view by Theoretical Physics Academia is that gravity can be described as curved or warped space or spacetime So how does this space or spacetime curve or warp Do certain particles of space get closer together in one vicinity of space and further apart in another Are there compressions and rarefactions in space like there are in air How can empty space form a path for a moving object to travel through if it is completely empty The answer is that Space is NOT empty According to a brand new type of physics called Reality Physics we now know that space is not empty but contains an active plenum structure that is continually being created by the active two dimensional outward motion of Time with Space What this actually means is that the Now Point in Time expands outward into space with an active two dimensional omnidirectional omnipositional displacement at the Speed of Light or  $c$  299 792 458 meters per second and that it also forms an inertial reference background pressure density throughout the universe We find that by placing a body of mass into this active inertial reference background pressure density we can create a vicinity of less active pressure density at that location where the mass is located This would obviously cause the greater pressure density surrounding the mass to implode with an accelerating motion down towards the surface of the mass body where the pressure density is less We call this implosively accelerating motion of the inertial reference background Gravitational Acceleration and this is what actually causes small objects to fall to the ground at the surface of the large body of mass Gravity is an action not a curvature or warpage of anything and therefore it must be caused by an action as revealed here by ACTION GRAVITY of Reality Physics

Gravity conveys the power of simple mathematics to tell the fundamental truth about nature. Many people, for example, know the tides are caused by the pull of the Moon and to a lesser extent the Sun. But very few can explain exactly how and why that happens. Fewer still can calculate the actual pulls of the Moon and Sun on the oceans. This book shows in clear detail how to do this with simple tools. It uniquely crosses disciplines: history, astronomy, physics, and mathematics, and takes pains to explain things frequently passed over or taken for granted in other books. Using a problem-based approach, Newton's Gravity explores the surprisingly basic mathematics behind gravity, the most fundamental force that governs the movements of satellites, planets, and the stars. Author Douglas W. MacDougal uses actual problems from the history of astronomy as well as original examples to deepen understanding of how discoveries were made and what they mean. Newton's Gravity concentrates strongly on the development of the science of orbital motion, beginning with Galileo, Kepler, and Newton, each of whom is prominently represented. Quotes and problems from Galileo's *Dialogs Concerning Two New Sciences* and particularly Newton's *Principia* help the reader get inside the mind of those thinkers and see the problems as they saw them and experience their concise and typically eloquent writing. This book enables students and curious minds to explore the mysteries of celestial motion without having to know advanced mathematics. It will whet the reader's curiosity to explore further and provide him or her the tools, mathematical or physical, to do so.

*Gravity from the Ground Up* Bernard Schutz, 2003-12-04

This book invites the reader to understand our Universe, not just marvel at it. From the clock-like motions of the planets to the catastrophic collapse of a star into a black hole, gravity controls the Universe. Gravity is central to modern physics, helping to answer the deepest questions about the nature of time, the origin of the Universe, and the unification of the forces of nature. Linking key experiments and observations through careful physical reasoning, the author builds the reader's insight step by step from simple but profound facts about gravity on Earth to the frontiers of research. Topics covered include the nature of stars and galaxies, the mysteries of dark matter and dark energy, black holes, gravitational waves, inflation, and the Big Bang. Suitable for general readers and for undergraduate courses, the treatment uses only high school level mathematics, supplemented by optional computer programs to explain the laws of physics governing gravity.

*Gravitational Physics* assesses the achievements of the field over the past decade in both theory and experiment, identifies the most promising opportunities for research in the next decade, and describes the resources necessary to realize those opportunities. A major theme running through the opportunities is the exploration of strong gravitational fields, such as those associated with black holes. The book is part of the ongoing decadal survey *Physics in a New Era*, which examines topics such as gravitational waves and their detection, classical and quantum theory of strong gravitational fields, precision measurements, and astronomical observations relevant to the predictions of Einstein's theory of general

relativity **Gravity-Paradigm Shift in Perception** C Prabhakar,2016-10-03 This book contains complete new explanation for Gravity Formation of Galaxies Light Heat and Black Holes along with other explanations that will change the way we perceive Gravity and Light The special curves like cycloid and helix used to derive mathematically that acceleration produced known as acceleration due to gravity is only due to two velocities namely rotation and revolution of the heavenly bodies not due to any gravity force which proves why inertial mass is equal to gravitational mass The new approach to find acceleration due to gravity leads to new values of g for the heavenly bodies of our solar system This value leads to new interpretation of atmospheric conditions that depends on g An attempt is made to describe the atmospheric conditions of other planets due to this variation This book contains Chapters on Formation of Galaxies giving explanation for rotation curve of the spiral galaxy without need for dark matter or energy It also gives new explanation for dual nature of light by describing it as particles in a wave motion combining both the explanation of wave and particle nature In the same chapter new interpretation of spectra supports an evident that light indeed is a particle in a wave motion as an electron gets converted to electromagnetic radiations spread into space and which in turn gets converted back to an electron when it falls on an Atom It also contains chapter on Black holes describing it as an empty space Another chapter on U Craft which is a flying object that uses directional centrifugal forces to fly instead of thrust of gases used by conventional space shuttle It can also be used for locomotion on the ground as well as to lift off and fly The special features of U craft are low altitude flying vertical lift off as well as landing and minimum floor space requirements without major surrounding disturbance It can also be extended to make voyages to other planets in the space age with the help of any suitable fuel See more at <https://notionpress.com/read/gravity-paradigm-shift-in-perception-sthash-koqUOEaL-dpuf>
