The Traveling Salesman Problem A Computational Study:

The Traveling Salesman Problem David L. Applegate, Robert E. Bixby, Vašek Chvátal, William J. Cook, 2011-09-19 This book presents the latest findings on one of the most intensely investigated subjects in computational mathematics the traveling salesman problem It sounds simple enough given a set of cities and the cost of travel between each pair of them the problem challenges you to find the cheapest route by which to visit all the cities and return home to where you began Though seemingly modest this exercise has inspired studies by mathematicians chemists and physicists Teachers use it in the classroom It has practical applications in genetics telecommunications and neuroscience The authors of this book are the same pioneers who for nearly two decades have led the investigation into the traveling salesman problem They have derived solutions to almost eighty six thousand cities yet a general solution to the problem has yet to be discovered Here they describe the method and computer code they used to solve a broad range of large scale problems and along the way they demonstrate the interplay of applied mathematics with increasingly powerful computing platforms They also give the fascinating history of the problem how it developed and why it continues to intrigue us

A Computational Study of Annealing-based Heuristics for the Traveling Salesman Problem Joshua W. Novel Trends in the Traveling Salesman Problem Donald Davendra, Magdalena Bialic-Davendra, 2020-12-09 The Traveling Salesman Problem TSP is widely considered one of the most intensively studied problems in computational mathematics and operations research Since its inception it has become the poster child for computational complexity research A number of problems have been transformed to a TSP problem and its application base now extends into scheduling manufacturing routing and logistics With the advent of high performance computing and advanced meta heuristics such as GPU programming and swarm based algorithms the TSP problem is positioned firmly as the go to problem for the development of the next generation of high performance intelligent heuristics This book looks to leverage some of these new paradigms for both students and researchers in this field

[The Traveling Salesman Problem](#) Weiqi Li, 2023-07-08 This book presents a new search paradigm for solving the Traveling Salesman Problem TSP The intrinsic difficulty of the TSP is associated with the combinatorial explosion of potential solutions in the solution space The author introduces the idea of using the attractor concept in dynamical systems theory to reduce the search space for exhaustive search for the TSP Numerous examples are used to describe how to use this new search algorithm to solve the TSP and its variants including multi objective TSP dynamic TSP and probabilistic TSP This book is intended for readers in the field of optimization research and application

[Traveling Salesman Problem](#) Federico Greco, 2008-09-01 The idea behind TSP was conceived by Austrian mathematician Karl Menger in mid 1930s who invited the research community to consider a problem from the everyday life from a mathematical point of view A traveling salesman has

to visit exactly once each one of a list of m cities and then return to the home city He knows the cost of traveling from any city i to any other city j Thus which is the tour of least possible cost the salesman can take In this book the problem of finding algorithmic technique leading to good optimal solutions for TSP or for some other strictly related problems is considered TSP is a very attractive problem for the research community because it arises as a natural subproblem in many applications concerning the every day life Indeed each application in which an optimal ordering of a number of items has to be chosen in a way that the total cost of a solution is determined by adding up the costs arising from two successively items can be modelled as a TSP instance Thus studying TSP can never be considered as an abstract research with no real importance
