over the coming decades and global living standards rise demand for fish is set to keep on growing With most wild capture fisheries already fully exploited much of that new demand will have to be met from aquaculture According to FAO estimates more than 50 % of all fish for human consumption now comes from aquaculture Aquaculture is one of the most resource efficient ways to produce protein Fish come out well because in general they convert more of the feed they eat into body mass than livestock animals Salmon is the most feed intensive farmed fish to convert feed to body weight gain and protein followed by chicken Aquaculture is the controlled cultivation and harvest of aquatic organisms Most commonly grown are finfish and shellfish but other aquatic organisms are also cultivated such as seaweed microalgae frogs turtles alligators and endangered species There are many similarities between aquaculture and agriculture but there are some important differences as well Aquaculture like agriculture is necessary to meet the food demands of a growing global population with diminishing natural fisheries stocks Aquaculture and agriculture are both farming However aquaculture is farming in the water and therefore requires a different set of knowledge skill and technology *Fish Farming Handbook* E.
