Sustainable Retail Refrigeration Judith A. Evans, Alan M. Foster, 2015-10-27 Carbon emissions from the retail segment of the food cold chain are relatively high compared to other parts of the food cold chain Studies have also shown that food temperature is less well controlled at the retail and consumer end of the cold chain There is therefore considerable potential to optimize performance of refrigerated display cabinets and the refrigeration systems that are used to operate them to reduce carbon emissions and to improve food temperature control Sustainable Retail Refrigeration draws together world experts on retail refrigeration In a single resource the authors cover the latest technologies and best current knowledge in the field With increasing concerns about energy use and global warming gasses retailers are increasingly being called to account for their actions Sustainable Retail Refrigeration is a valuable reference to manufacturers managers and policy makers incorporating both a design and an operational perspective **Concise Handbook of Fluorocarbon Gases** Sina

Ebnesajjad, 2021-03-09 This book describes fluorocarbons gases preparation process properties applications and their evolution over time The impact of fluorocarbons on the ozone layer and global and the development to mitigate those effects have been specially emphasized The first major industrial fluorinated compound was developed in the 1920 s to replace ammonia and sulfur dioxide refrigerants at the General Motors Frigidaire Division by Thomas Midgley Jr and Albert Leon Henne They developed a family of fluorocarbons trademarked Freon for auto air conditioning units revolutionizing the auto industry Other applications were developed over time including fire extinguishers propellants blowing agents cleaners anesthesia artificial blood and others impacting every facet of life In spite of being in broad global use for nearly a century fluorocarbon gases have gone through great evolution during the last few decades In the 1980s it was discovered chlorofluorocarbon CFC gases are harmful to the ozone layer mainly because of their chlorine content Chlorine was released in the upper atmosphere when chlorofluorocarbon molecules were broken down by the high energy cosmic radiation CFCs

were progressively banned following the Montreal Protocol of 1987 CFCs were replaced by fluorinated gases containing either less chlorine hydrofluoro chlorocarbons or HCFCs which are much less damaging about 90% less to the ozone layer or with fluorinated gases containing no chlorine i e hydrofluorocarbons or HFCs HFC have no impact on the ozone layer but impact global warming detrimentally HFCs are usable without need for changes to the existing refrigeration or air conditioning installations More recently hydrofluoroolefins HFOs which have little or no negative impact on global warming have been developed to replace or reduce the use of HFCs HFOs are used as single compounds or in blends Research and development continues to develop and replace the HCFCs and HFCs completely with environmentally friendly products Concise Handbook of Fluorocarbon Gases presents a reference and text for the commercial fluorocarbon gases which have great many application in a wide range of industries such as refrigeration and air conditioning as well as consumer products

Investigation and Optimisation of Commercial Refrigeration Cycles Using the Natural Refrigerant CO₂ Jason Alexander Shilliday,2012 With tighter regulations on the use of Hydrofluorocarbons HFCs due to their high GWP Global Warming Potential many supermarket operators are looking for alternative refrigerants To contribute to this the objectives of this thesis are to investigate the practicality environmental benefits and economic viability of an all CO₂ transcritical refrigeration system suitable for small supermarkets Whilst the environmental benefits of using CO₂ as a refrigerant are clear there is rather limited practical and technical knowledge on the design and operation of these systems In this work simulation models of a transcritical booster CO₂ refrigeration system have been developed to investigate and evaluate its performance against that of a traditional HFC system The models were verified using test results from an experimental CO₂ system built at Brunel University To evaluate the performance of the CO₂ refrigeration system in the field energy data from a real supermarket employing a HFC refrigeration system was used for energy simulations The results demonstrate that the annual energy consumption of the CO₂ refrigeration system in a small supermarket in Northern Ireland would be equivalent to that of a typical HFC refrigeration system However the low GWP of CO₂ will result in a 50% reduction in the combined direct and indirect CO₂ emissions over the operational life of the system assuming an annual leakage rate of 15% Northern Ireland has a high number of small supermarkets due to its rural population approximately 615 The CO₂ system presented in this research could replace the existing R404A systems in these small supermarkets resulting in emissions reduction of up to 188 752 tCO₂e This research has developed selection techniques and criteria to be considered by supermarket designers and operators when developing national strategies for the eventual phase out of HFC refrigerants in all supermarket sizes The validated simulation models developed in this research combined with the detailed geographical and refrigeration load ratio analysis presented will provide valuable information that will assist system designers and operators in the efficient design and optimisation of CO₂ technology for small supermarkets

Transcritical CO₂ Heat Pump Xin-rong Zhang,Hiroshi Yamaguchi,2021-05-10 A timely and comprehensive introduction to CO₂ heat pump theory and usage A comprehensive introduction of CO₂ application in heat pump authored by leading scientists in the field CO₂ is a hot topic due to concerns over global warming and the greenhouse effect Its disposal and application has attracted considerable research and governmental interest Explores the basic theories devices systems and cycles and real application designs for varying applications ensuring comprehensive coverage of a current topic CO₂ heat transfer has everyday

applications including water heaters air conditioning systems residential and commercial heating systems and cooling systems

Comparative Analysis of Various CO₂ Configurations in Supermarket Refrigeration Systems, 2014 Our paper presents an analysis of various CO₂ transcritical and cascade secondary loop refrigeration systems that are becoming popular in supermarket applications with the objective of optimizing the operating parameters of these systems In addition the performance of selected CO₂ based refrigeration systems is compared to the baseline R404A multiplex direct expansion system using bin analyses in the eight climate zones of the United States Moreover for the refrigeration systems investigated it was found that the Transcritical Booster System with Bypass Compressor TBS BC had the lowest energy consumption for ambient temperatures T_{amb} less than 8 C and for higher ambient temperatures the R404A direct expansion system was found to have the lowest energy consumption Finally the TBS BC performs equivalent to or better than the R404A direct expansion system in the northern two thirds of the US For the southern portion of the US the R404A multiplex DX system performs better than CO₂ systems
