Construction Economics A New Approach:

Construction Economics Danny Myers, 2013-01-17 *Construction Economics* provides students with the principles and concepts underlying the relationship between economic theory and the construction industry. The New Approach adopts an argument that economics is central to government initiatives concerning sustainable construction. This edition has been revised to explain the effects of the current economic crisis on the construction industry. In addition, sections relating to less developed countries, the economics of sustainable development, and theories relating to a firm's bid strategy have all been rewritten. With new data, examples, initiatives, readings, glossary items, and references, the third edition of this established core text builds on the strengths of the previous edition: a clear and user-friendly style, use of a second colour to highlight important definitions and formulae, regular summaries of key points, a glossary of key terms, extensive use of tables and figures, extracts from the academic journal *Construction Management and Economics* to consolidate and prompt discussion, reviews of useful websites. This invaluable textbook is essential reading across a wide range of disciplines from construction management and civil engineering to architecture, property, and surveying.

Construction Economics Danny Myers, 2004
Students across a wide range of disciplines ranging from construction management and construction engineering through to architecture, property, and surveying should find this an invaluable textbook.

Modern Construction Economics Gerard de Valence, 2010-11-10
Modern construction economics has a wider focus than was previously the case, with stronger links to mainstream economics, reflecting increasing interest in a range of theoretical issues. This book brings together the essential reviews of this trend and pushes towards the development of a comprehensive theoretical framework for construction economics.

Construction Microeconomics Christian Brockmann, 2023-01-17
CONSTRUCTION MICROECONOMICS Unique and comprehensive reference describing microeconomic approaches, theories, and models adapted to and developed for the construction industry. *Construction Microeconomics* provides comprehensive coverage of microeconomics applied to the construction industry, focusing on construction clients who initiate construction projects and on contractors who transform the ideas and plans of clients into infrastructure and buildings. With the help of microeconomic theory, it tries to answer questions about decision making by clients, contractors, and governments with respect to projects in the built environment. It includes discussions of alternative theories to mainstream microeconomics, such as new institutional economics, behavioral economics, and the capability approach. Applications from the construction sector, including land supply, sustainability, industrialization, and lean construction, are provided to ground the theory in practical construction. In *Construction Microeconomics*, readers will learn how microeconomic theory relies heavily on assumptions for modeling and the nuances of adjusting those assumptions. How heterogeneous contract goods affect supply and demand, markets, information technology, and accordingly the theories of contractors and owners. How interaction influences the production process and how land as a production factor changes the

production function How ex ante costs determine the cost theory of the contractor and why contracting is more akin to the service sector than the goods sector Advanced undergraduate and masters students lecturers and academics in construction and related disciplines and professionals in the construction industry looking for expert analysis into a unique facet of the field will find Construction Microeconomics to be a valuable complete and authoritative reference on the subject
