

Chapter 20

Multilane Highways

20.1 Description

Increasing traffic flow has caused engineers to find ways to increase the capacity of limited infrastructure by adding an additional level of transportation facilities to the system. One such adaptation of these facilities is the multilane highway (with two or more lanes in each direction). The operational characteristics, capacity and level of service (LOS) concepts are important parameters in the analysis and LOS criteria for multilane highways (the type will be covered in the next section).

20.2 Multilane Highways

A highway is a public road (usually a single-way) connecting two or more communities. It normally carries more than one way for the movement of traffic in each direction, and is designed to be used almost all year, but that does not preclude temporary closures for the use of specialized equipment and other uses. A highway is called a multilane highway, multilane highway with an auxiliary or median, or a divided highway if it has a median or divider. A highway with a median or divider is called a two-way dual-lane highway and normally has three or more lanes in each direction providing a continuous sequence of daily trips.

20.2.1 Highway Classification

Although there are many methods of classification of highways, the most common one is based on the number of lanes. If the highway has two (classified as:

- Two-lane highway;
- Four-lane highway; and
- Six-lane or more-lane highway.

Advances in Transportation Engineering Srinivas S. Pulugurtha,Indrajit Ghosh,Sabyasachi Biswas,2019 **Handbook on Artificial Intelligence and Transport** Hussein Dia,2023-10-06 With AI advancements eliciting imminent changes to our transport systems this enlightening Handbook presents essential research on this evolution of the transportation sector It focuses on not only urban planning but relevant themes in law and ethics to form a unified resource on the practicality of AI use **Smart and Green Solutions for Transport Systems** Grzegorz Sierpiński,2019-11-13 This proceedings book gathers selected papers presented at the 16th Scientific and Technical Conference Transport Systems Theory and Practice organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 16 18 September 2019 in Katowice Poland More details at www.TSTP.polsl.pl Which of the multi criteria methods should be applied to support decision making processes while tackling problems of sustainable transport solutions How can individual issues encountered when implementing smart solutions in transport systems be solved What advanced tools can be used to assess the current condition of selected elements of transport systems both in terms of transport infrastructure and traffic streams What data concerning transport processes can be collected automatically and how can we use it What is the right approach to the problem of the development of the spatial planning of transport systems This book provides the answers to these and many other questions It also includes a wealth of numerical analyses based on significant data sets illustrating the close affiliation between smart transport systems and environment friendly solutions The book primarily addresses the needs of three target groups Scientists and researchers ITS field Those working for local authorities responsible for the transport systems at the urban and regional levels Representatives of business traffic strategy management and industry manufacturers of ITS components **Methods and Models in Transport and Telecommunications** Aura Reggiani,Laurie A. Schintler,2006-03-30 One aspect of the new economy is a transition to a networked society and the emergence of a highly interconnected interdependent and complex system of networks to move people goods and information An example of this is the increasing reliance of networked systems e g air transportation networks electric power grid maritime transport etc on telecommunications and information infrastructure Many of the networks that evolved today have an added complexity in that they have both a spatial structure i e they are located in physical space but also an a spatial dimension brought on largely by their dependence on information technology They are also often just one component of a larger system of geographically integrated and overlapping networks operating at different spatial levels An understanding of these complexities is imperative for the design of plans and policies that can be used to optimize the efficiency performance and safety of transportation telecommunications and other networked systems In one sense technological advances along with economic forces that encourage the clustering of activities in space to reduce transaction costs have led to more efficient network structures At the same time the very properties that make these

networks more efficient have also put them at a greater risk for becoming disconnected or significantly disrupted when super connected nodes are removed either intentionally or through a targeted attack

Integration as Solution for Advanced Smart Urban Transport Systems Grzegorz Sierpiński, 2018-08-25 Methods of advanced data collecting and their analysis models which help with decision problems as well as technical solutions which improve the integrity of contemporary transport systems at urban area are only some of many problems connected with integration in passenger and freight transport which have been discussed in this book The book expresses case study based scientific and practical approach to the problems of contemporary transport systems The proposed methods and models enable a system approach to assess current solutions In turn implementation proposals may support the improvement of the integrity of individual elements of transport systems and thus increase its effectiveness on the global scale With regard to the research results discussed and the selected solutions applied the book primarily addresses the needs of three target groups Scientists and researchers ITS field Local authorities responsible for the transport systems at the urban and regional level Representatives of business traffic strategy management and industry manufacturers of ITS components This book gathers selected papers presented at the 15th Scientific and Technical Conference Transport Systems Theory and Practice organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held in Katowice Poland on September 17 19 2018
