Algorithms on Trees and Graphs Gabriel Valiente,2021-10-11 Graph algorithms is a well established subject in mathematics and computer science Beyond classical application fields such as approximation combinatorial optimization graphics and operations research graph algorithms have recently attracted increased attention from computational molecular biology and computational chemistry Centered around the fundamental issue of graph isomorphism this text goes beyond classical graph problems of shortest paths spanning trees flows in networks and matchings in bipartite graphs Advanced algorithmic results and techniques of practical relevance are presented in a coherent and consolidated way This book introduces graph algorithms on an intuitive basis followed by a detailed exposition in a literate programming style with correctness proofs as well as worst case analyses Furthermore full C implementations of all algorithms presented are given using the LEDA library of efficient data structures and algorithms

An Introduction to Data Structures and Algorithms J.A. Storer,2012-12-06 Data structures and algorithms are presented at the college level in a highly accessible format that presents material with one page displays in a way that will appeal to both teachers and students The thirteen chapters cover Models of Computation Lists Induction and Recursion Trees Algorithm Design Hashing Heaps Balanced Trees Sets Over a Small Universe Graphs Strings Discrete Fourier Transform Parallel Computation Key features Complicated concepts are expressed clearly in a single page with minimal notation and without the clutter of the syntax of a particular programming language algorithms are presented with self explanatory pseudo code Chapters 1 4 focus on elementary concepts the exposition unfolding at a slower pace Sample exercises with solutions are provided Sections that may be skipped for an introductory course are starred Requires only some basic mathematics background and some computer programming experience Chapters 5 13 progress at a faster pace The material is suitable for undergraduates or first year graduates who need only review Chapters 1 4 This book may be used for a one semester introductory course based on Chapters 1 4 and portions of the chapters on algorithm design hashing and graph algorithms and for a one semester advanced course that starts at Chapter 5 A year long course may be based on the entire book Sorting often perceived as rather technical is not treated as a separate chapter but is used in many examples including bubble sort merge sort tree sort heap sort quick sort and several parallel algorithms Also lower bounds on sorting by comparisons are included with the presentation of heaps in the context of lower bounds for comparison based structures Chapter 13 on parallel models of computation is something of a

Elements of Hypermedia Design: Techniques for Navigation & Visualization in Cyberspace Peter Gloor,2013-11-11 The hypermedia authoring process has been vividly described in a special issue of the Economist as a combination of writing a book a play a film and a radio or television show A hypermedia document combines all these elements and adds some of its own The author s first job is to structure and explain all of the information The author then must distill the information into brief descriptive nodes Each node has to contain a list of the ingredients and instructions on how the ingredients are mixed together to the greatest advantage The structure of the material provided is translated into an architectural metaphor of some kind much of the designer s work is the creation of this imaginary space Then the designers must chart the details of what to animate what to film who to interview and how to arrange the information in the space to be built Eco95a This book presents guidelines tools and techniques for prospective authors such that they can design better hypermedia documents and applications It surveys the different techniques used to organize search and structure information in a large information system It then describes the algorithms used to locate reorganize and link data to enable navigation and retrieval It looks in detail at the creation and presentation of certain types of visual information namely algorithm animations It introduces new mechanisms for editing audio and video data streams
