American Secret Projects Fighters And Interceptors 1945:

American Secret Projects Tony Buttler,2007 The Secret Projects series is now well established with both aviation historians and modelers American Secret Projects Bombers Attack and Anti Submarine Aircraft 1945-1974 describes the important area of post World War 2 bomber development in the United States During the period to the 1970s the U S Air Force operated several classes of bomber heavy long range types for strategic operations medium bombers and fighter bombers for interdiction and ground support The U S Navy had its own series of attack aircraft and bombers for delivering nuclear weapons while the antisubmarine aircraft was another area to be examined in considerable depth As a superpower America was also able to look at some of the more unusual approaches in the creative process for example bombers propelled by nuclear propulsion Many of the aircraft that entered service or flew only as prototypes resulted from design competitions involving many other proposals that for one reason or another never left the drawing board American Secret Projects Tony Buttler,2007 American Secret Projects 1 Tony Buttler,Alan Griffith (Military aircraft researcher),2016-04-07 Featuring the obscure the unusual the unbuilt and the unseen The secret is out Secret Projects is back This is a new title in this highly acclaimed series this time looking at concepts developed by the US aircraft industry in the years immediately prior to and during World War 2 This book includes and describes the major fighter and bomber proposals from the American aircraft industry which embrace various fighter and interceptor concepts medium heavy and intercontinental bombers attack aircraft and anti submarine aircraft both for the USAF and US Navy Particular emphasis is placed on Circular Proposals a system of submitting designs against requirements circulated around the industry by the Army Air Force in the 1930s and early 1940s The illustrations show drawings and photographs of unbuilt designs merged with the history and photographs of real aeroplanes Very little has been published previously about American projects from this time period and much of the material will not have been seen widely before it will therefore be fascinating reading for all lovers of the previously highly successful Secret Projects series and aviation historians **Fighters Over the Fleet** Norman Friedman,2016-10-30 A tactical and technical history of the development of British American and Japanese naval air defense from the 1920s to the 1980s This is an account of the evolution of naval fighters for fleet air defense and the parallel evolution of the ships operating and controlling them concentrating on the three main exponents of carrier warfare the British Royal Navy the U S Navy and the Imperial Japanese Navy It describes the earliest efforts from the 1920s but it was not until radar allowed the direction of fighters that organized air defense became possible Thus major naval air battles of the Second World War like Midway the Pedestal convoy the Philippine Sea and Okinawa are portrayed as tests of the new technology This was ultimately found wanting by the Kamikaze campaigns leading to postwar moves towards computer control and new kinds of fighters After 1945 the threats of nuclear weapons and standoff missiles compounded the difficulties of naval air defense The second half of the book covers R N and U S N attempts to solve these problems looking at the American experience in Vietnam and

British operations in the Falklands War It concludes with the ultimate U S development of techniques and technology to fight the Outer Air Battle in the 1980s which in turn point to the current state of carrier fighters and the supporting technology Based largely on documentary sources some previously unused this book will appeal to both the naval and aviation communities Fighters Over the Fleet provides more information about fleet air defense than any other work currently available It is recommended for specialist as well aviation minded readers Naval Historical Foundation American Flying Boats and Amphibious Aircraft E.R. Johnson,2016-03-29 This work is a comprehensive heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States It is divided into three chronological sections the early era 1912 1928 the golden era 1928 1945 and the post war era 1945 present with historical overviews of each period Within each section individual aircraft types are listed in alphabetical order by manufacturer or builder with historical background technical specifications drawings and one or more photographs Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage **Supersonic Eagles** W. D. Becker,2012 Following the Second World War major advancements in aviation technology allowed the development of jet aircraft with capabilities undreamt of only a few years earlier During the 1950s the US Air Force placed six new jet fighters into service which became known as the Century Series Fighters In this publication the histories of the F 100 Super Sabre F 101 Voodoo F 102 Delta Dagger F 104 Starfighter F 105 Thunderchief and the F 106 Delta Dart are related Flypast ,2008

AMERICAN SECRET PROJECTS 5 TONY. BUTTLER,2025 Jet Planes of the Third Reich Manfred Griebel,1998 Om tyske jet og raketdrevne flyprojekter designet og udvikle men ikke pr vefl jet f r hen imod slutningen af den 2 verdenskrig Flere af projekterne blev senere overtaget af de allierede og videreudviklet efter krigen Dette bind I indeholder udviklingen af tyske dagjagere og interceptors Aviation News ,2005 **Project Natter** Brett Gooden,2005-12-31 In 1944 in response to the bombing of German cities and factories by the Allies an inventor named Erich Bachem developed Projekt Natter Viper an extraordinary highly secret vertical take off semi expendable single seat rocket fighter armed with a nose mounted honeycomb of 73 mm or 55 mm spin stabilized air to air rockets as well as 30 mm cannon The Natter was intended to offer high speed defense of key targets Once blasted into the air from its vertical launch tower the pilot of the Natter was to climb towards an enemy formation using an internal rocket target an enemy bomber and fire his battery of rockets He would then use the remaining kinetic energy to climb higher than the bombers in order to mount a ramming attack Just before impact the pilot was to trigger a mechanism that would activate an ejection seat and separate the rocket unit which would return to earth by means of an automatically deployed parachute for reuse Relatively little has been published on the Natter and this book will provide a detailed and definitive account of this unusual but fascinating aircraft This will be required reading for all those interested in the history of the Luftwaffe during World War II particularly for those fascinated by the radical and revolutionary projects which German aircraft designers contrived toward the end of the Nazi regime
