**Operator Theory in Function Spaces** Kehe Zhu, 2007 This book covers Toeplitz operators Hankel operators and composition operators on both the Bergman space and the Hardy space The setting is the unit disk and the main emphasis is on size estimates of these operators boundedness compactness and membership in the Schatten classes Most results concern the relationship between operator theoretic properties of these operators and function theoretic properties of the inducing symbols Thus a good portion of the book is devoted to the study of analytic function spaces such as the Bloch space Besov spaces and BMOA whose elements are to be used as symbols to induce the operators we study The book is intended for both research mathematicians and graduate students in complex analysis and operator theory The prerequisites are minimal a graduate course in each of real analysis complex analysis and functional analysis should sufficiently prepare the reader for the book Exercises and bibliographical notes are provided at the end of each chapter These notes will point the reader to additional results and problems Kehe Zhu is a professor of mathematics at the State University of New York at Albany His previous books include Theory of Bergman Spaces Springer 2000 with H Hedenmalm and B Korenblum and Spaces of Holomorphic Functions in the Unit Ball Springer 2005 His current research interests are holomorphic function spaces and operators acting on them

**Spaces of Analytic Functions** Jr. Cowen, Barbara I. MacCluer, 2019-03-04 The study of composition operators lies at the interface of analytic function theory and operator theory Composition Operators on Spaces of Analytic Functions synthesizes the achievements of the past 25 years and brings into focus the broad outlines of the developing theory It provides a

comprehensive introduction to the linear operators of composition with a fixed function acting on a space of analytic functions This new book both highlights the unifying ideas behind the major theorems and contrasts the differences between results for related spaces Nine chapters introduce the main analytic techniques needed Carleson measure and other integral estimates linear fractional models and kernel function techniques and demonstrate their application to problems of boundedness compactness spectra normality and so on of composition operators Intended as a graduate level textbook the prerequisites are minimal Numerous exercises illustrate and extend the theory For students and non students alike the exercises are an integral part of the book By including the theory for both one and several variables historical notes and a comprehensive bibliography the book leaves the reader well grounded for future research on composition operators and related areas in operator or function theory

**Fractional Cauchy Transforms** Rita A. Hibscheiler, Thomas H. MacGregor, 2020-01-15 Presenting new results along with research spanning five decades Fractional Cauchy Transforms provides a full treatment of the topic from its roots in classical complex analysis to its current state Self contained it includes introductory material and classical results such as those associated with complex valued measures on the unit circle that form the basis of the developments that follow The authors focus on concrete analytic questions with functional analysis providing the general framework After examining basic properties the authors study integral means and relationships between the fractional Cauchy transforms and the Hardy and Dirichlet spaces They then study radial and nontangential limits followed by chapters devoted to multipliers composition operators and univalent functions The final chapter gives an analytic characterization of the family of Cauchy transforms when considered as functions defined in the complement of the unit circle

**Nonlinear Maps and their Applications** Ricardo López-Ruiz, Danièle Fournier-Prunaret, Yoshifumi Nishio, Clara Grácio, 2015-03-11 In the field of Dynamical Systems nonlinear iterative processes play an important role Nonlinear mappings can be found as immediate models for many systems from different scientific areas such as engineering economics biology or can also be obtained via numerical methods permitting to solve non linear differential equations In both cases the understanding of specific dynamical behaviors and phenomena is of the greatest interest for scientists This volume contains papers that were presented at the International Workshop on Nonlinear Maps and their Applications NOMA 2013 held in Zaragoza Spain on September 3 4 2013 This kind of collaborative effort is of paramount importance in promoting communication among the various groups that work in dynamical systems and networks in their research theoretical studies as well as for applications This volume is suitable for graduate students as well as researchers in the field

**Nonautonomous Dynamics** David N. Cheban, 2020-01-22 This book emphasizes those topological methods of dynamical systems and theories that are useful in the study of different classes of nonautonomous evolutionary equations The content is developed over six chapters providing a thorough introduction to the techniques used in the Chapters III VI described by Chapter I II The author gives a systematic treatment of the basic mathematical theory and

constructive methods for Nonautonomous Dynamics They show how these diverse topics are connected to other important parts of mathematics including Topology Functional Analysis and Qualitative Theory of Differential Difference Equations Throughout the book a nice balance is maintained between rigorous mathematics and applications ordinary differential difference equations functional differential equations and partial difference equations The primary readership includes graduate and PhD students and researchers in in the field of dynamical systems and their applications control theory economic dynamics mathematical theory of climate population dynamics oscillation theory etc [Hilbert Spaces of Analytic Functions](#) Javad Mashreghi, Thomas Ransford, Kristian Seip, 2010-01-01

[Operator Theory, Operator Algebras and Applications](#) William Arveson, 1990 Operator theory has come of age during the last twenty years The subject has developed in several directions using new and powerful methods that have led to the solution of basic problems previously thought to be inaccessible In addition operator theory has had fundamental connections with a range of other mathematical topics For example operator theory has made mutually enriching contacts with other areas of mathematics such as algebraic topology and index theory complex analysis and probability theory The algebraic methods employed in operator theory are diverse and touch upon a broad area of mathematics There have been direct applications of operator theory to systems theory and statistical mechanics And significant problems and motivations have arisen from the subject s traditional underpinnings for partial differential equations This two volume set contains the proceedings of an AMS Summer Institute on Operator Theory Operator Algebras held in July 1988 at the University of New Hampshire The Institute sought to summarize progress and examine the common points of view that now run through the subject With contributions from some of the top experts in the field this publication illuminates a broad range of current research topics in operator theory
