cross section through most active research topics on the more theoretical side of the field It contains 11 chapters grouped into parts on computability in analysis complexity dynamics and randomness and constructivity logic and descriptive complexity All chapters are written by leading experts working at the cutting edge of the respective topic Researchers and graduate students in the areas of theoretical computer science and mathematical logic will find systematic introductions into many branches of computable analysis and a wealth of information and references that will help them to navigate the modern research literature in this field

Introduction To Classical Mechanics: Solutions To Problems John Dirk Walecka, 2020-08-24 The textbook Introduction to Classical Mechanics aims to provide a clear and concise set of lectures that take one from the introduction and application of Newton's laws up to Hamilton's principle of stationary action and the Lagrangian mechanics of continuous systems An extensive set of accessible problems enhances and extends the coverage It serves as a prequel to the author's recently published book entitled Introduction to Electricity and Magnetism based on an introductory course taught some time ago at Stanford with over 400 students enrolled Both lectures assume a good concurrent course in calculus and familiarity with basic concepts in physics the development is otherwise self-contained As an aid for teaching and learning and as was previously done with the publication of Introduction to Electricity and Magnetism Solutions to Problems this additional book provides the solutions to the problems in the text Introduction to Classical Mechanics

Molecular Theory of Water and Aqueous Solutions Arieh Ben-Naim, 2009 The aim of this book is to explain the unusual properties of both pure liquid water and simple aqueous solutions in terms of the properties of single molecules and interactions among small numbers of water molecules It is mostly the result of the author's own research spanning over 40 years in the field of aqueous solutions An understanding of the properties of liquid water is a prelude to the understanding of the role of water in biological systems and for the evolution of life The book is targeted at anyone who is interested in the outstanding properties of water and its role in biological systems It is addressed to both students and researchers in chemistry physics and biology

Mathematical Modelling Simon Serovajsky, 2021-11-23 Mathematical Modelling sets out the general principles of mathematical modelling as a means comprehending the world Within the book the problems of physics engineering chemistry biology medicine economics ecology sociology psychology political science etc are all considered through this uniform lens The author describes different classes of models including lumped and distributed parameter systems deterministic and stochastic models continuous and discrete models static and dynamical systems and more From a mathematical point of view the considered models can be understood as equations and systems of equations of different nature and variational principles In addition to this mathematical features of mathematical models applied control and

optimization problems based on mathematical models and identification of mathematical models are also presented Features Each chapter includes four levels a lecture main chapter material an appendix additional information notes explanations technical calculations literature review and tasks for independent work this is suitable for undergraduates and graduate students and does not require the reader to take any prerequisite course but may be useful for researchers as well Described mathematical models are grouped both by areas of application and by the types of obtained mathematical problems which contributes to both the breadth of coverage of the material and the depth of its understanding Can be used as the main textbook on a mathematical modelling course and is also recommended for special courses on mathematical models for physics chemistry biology economics etc
