Journal of Economic Literature, 1989 First Course in Algorithms Through Puzzles Ryuhei Uehara, 2026-03-02 This textbook introduces basic algorithms and explains their analytical methods All algorithms and methods introduced in this book are well known and frequently used in real programs Intended to be self contained the contents start with the basic models and no prerequisite knowledge is required This book is appropriate for undergraduate students in computer science mathematics and engineering as a textbook and is also appropriate for self study by beginners who are interested in the fascinating field of algorithms More than 40 exercises are distributed throughout the text and their difficulty levels are indicated Solutions and comments for all the exercises are provided in the last chapter These detailed solutions will enable readers to follow the author's steps to solve problems and to gain a better understanding of the contents

Solutions to selected exercises from distributed algorithms, 1998 *Algorithms* Sanjoy Dasgupta, 2011 Problems on Algorithms Habib Izadkhah, 2022 With approximately 2500 problems this book provides a collection of practical problems on the basic and advanced data structures design and analysis of algorithms To make this book suitable for self instruction about one third of the algorithms are supported by solutions and some others are supported by hints and comments This

book is intended for students wishing to deepen their knowledge of algorithm design in an undergraduate or beginning graduate class on algorithms for those teaching courses in this area for use by practicing programmers who wish to hone and expand their skills and as a self study text for graduate students who are preparing for the qualifying examination on algorithms for a Ph D program in Computer Science or Computer Engineering About all it is a good source for exam problems for those who teach algorithms and data structure The format of each chapter is just a little bit of instruction followed by lots of problems This book is intended to augment the problem sets found in any standard algorithms textbook This book begins with four chapters on background material that most algorithms instructors would like their students to have mastered before setting foot in an algorithms class The introductory chapters include mathematical induction complexity notations recurrence relations and basic algorithm analysis methods provides many problems on basic and advanced data structures including basic data structures arrays stack queue and linked list hash tree search and sorting algorithms provides many problems on algorithm design techniques divide and conquer dynamic programming greedy algorithms graph algorithms and backtracking algorithms is rounded out with a chapter on NP completeness
