ALONSO, **Fundamental University Physics: Quantum and statistical physics** Marcelo Alonso, Edward J. Finn, 1968

General physics, relativity, astronomy and mathematical physics and methods, 1993 *General Relativity for Mathematicians* R.K. Sachs, H.-H. Wu, 2012-12-06 This is a book about physics written for mathematicians The readers we have in mind can be roughly described as those who

- 1 are mathematics graduate students with some knowledge of global differential geometry
- 2 have had the equivalent of freshman physics and find popular accounts of astrophysics and cosmology interesting
- 3 appreciate mathematical clarity but are willing to accept physical motivations for the mathematics in place of mathematical ones
- 4 are willing to spend time and effort mastering certain technical details such as those in Section 1.1

Each book disappoints some readers This one will disappoint

- 1 physicists who want to use this book as a first course on differential geometry
- 2 mathematicians who think Lorentzian manifolds are wholly similar to Riemannian ones or that given a sufficiently good mathematical background the essentials of a subject like cosmology can be learned without so much hard work on boring details
- 3 those who believe vague philosophical arguments have more than historical and heuristic significance that general relativity should somehow be proved or that axiomatization of this subject is useful
- 4 those who want an encyclopedic treatment the books by Hawking Ellis Penrose Weinberg and Misner Thorne Wheeler I go further into the subject than we do see also the survey article Sachs Wu
- 5 mathematicians who want to learn quantum physics or unified field theory unfortunately quantum physics texts all seem either to be for physicists or merely concerned with formal mathematics
