Who's who, 1987 **Lipids** Michael I. Gurr, John L. Harwood, Keith N. Frayn, Denis J. Murphy, Robert H. Michell, 2016-06-10 For the 6th Edition of this highly regarded textbook devoted to lipids the title has been modified from Lipid Biochemistry to Lipids to acknowledge the coming together of biological and medical sciences the increasingly blurred boundaries between them and the growing importance of lipids in diverse aspects of science and technology The principal aims of this new edition to inform students and researchers about lipids to assist teachers and encourage further research have not changed since previous editions Significant advances in lipid science have demanded yet another extensive rewriting for this edition with the addition of two new authors to cover new knowledge of genes coding for proteins involved in lipid metabolism the many lipids involved in cell signalling the roles of lipids in health and disease and new developments in biotechnology in support of agriculture and industry An introductory chapter summarizes the types of lipids covered and their identification and provides a guide to the contents Chapters contain boxes illustrating special topics key point summaries and suggested further reading Lipids Sixth Edition provides a huge wealth of information for upper level students of biological and clinical sciences food science and nutrition and for professionals working in academic and industrial research Libraries in all universities and research establishments where biological medical and food and nutritional sciences are studied and taught should have copies of this excellent and comprehensive new edition on their shelves *Lipid Biochemistry: An Introduction* M. I. Gurr, 2012-12-06 In the preface to the Second edition we made a prediction that many exciting developments would take place in the coming years that would change the face of a new edition This has indeed been the case and the current edition reflects these new advances Our picture of the structure of the fatty acid synthetase has changed dramatically bringing a new concept in enzymology the multicatalytic polypeptide chain This new knowledge owes much to the exploitation of genetic mutants the use of which is undoubtedly going to extend into many other areas of lipid biochemistry An understanding of the control of lipid metabolism has also advanced considerably during the last decade and we have tried to reflect that here although it will be some years before a truly integrated picture can be obtained For this reason we have

continued to deal with the control of particular aspects of lipid metabolism fatty acids triacylglycerols lipoprotein in the specific chapters but we can foresee the time when a chapter on the overall integration of lipid metabolism will be appropriate and feasible As a particular example the exciting new concepts of the control of cholesterol metabolism in specific tissues via the interaction of low density lipoproteins with cell surface receptors have been described in Chapter 6

Lipid Biochemistry J.L. Harwood, M.I. Gurr, 2013-04-17 Lipids can usually be extracted easily from tissues by making use of their hydrophobic characteristics However such extractions yield a complex mixture of different lipid classes which have to be purified further for quantitative analysis Moreover the crude lipid extract will be contaminated by other hydrophobic molecules e.g. by intrinsic membrane proteins Of the various types of separation processes thin layer and column chromatography are most useful for intact lipids High performance liquid chromatography HPLC is also rapidly becoming more popular especially for the fractionation of molecular species of a given lipid class The most powerful tool for quantitation of the majority of lipids is gas liquid chromatography GLC The method is very sensitive and if adapted with capillary columns can provide information with regard to such subtle features as the position or configuration of substitutions along acyl chains By coupling GLC or HPLC to a radioactivity detector then the techniques are also very useful for metabolic measurements Although research laboratories use generally sophisticated analytical methods such as GLC to analyse and quantify lipid samples chemical derivatizations are often used in hospitals For these methods the lipid samples are derivatized to yield a product which can be measured simply and accurately usually by colour Thus total triacylglycerol cholesterol or phospholipid phosphorus can be quantitated conveniently without bothering with the extra information of molecular species etc which might be determined by more thorough analyses
