Biologically Inspired CMOS Image Sensor Mukul Sarkar, Albert Theuwissen, 2012-12-14 Biological systems are a source of inspiration in the development of small autonomous sensor nodes The two major types of optical vision systems found in nature are the single aperture human eye and the compound eye of insects The latter are among the most compact and smallest vision sensors The eye is a compound of individual lenses with their own photoreceptor arrays The visual system of

insects allows them to fly with a limited intelligence and brain processing power A CMOS image sensor replicating the perception of vision in insects is discussed and designed in this book for industrial machine vision and medical applications The CMOS metal layer is used to create an embedded micro polarizer able to sense polarization information This polarization information is shown to be useful in applications like real time material classification and autonomous agent navigation Further the sensor is equipped with in pixel analog and digital memories which allow variation of the dynamic range and in pixel binarization in real time The binary output of the pixel tries to replicate the flickering effect of the insect s eye to detect smallest possible motion based on the change in state An inbuilt counter counts the changes in states for each row to estimate the direction of the motion The chip consists of an array of 128x128 pixels it occupies an area of 5 x 4 mm² and it has been designed and fabricated in an 180nm CMOS CIS process from UMC CMOS Imagers Orly Yadid-Pecht,Ralph Etienne-Cummings,2013-04-11 The idea of writing a book on CMOS imaging has been brewing for several years It was placed on a fast track after we agreed to organize a tutorial on CMOS sensors for the 2004 IEEE International Symposium on Circuits and Systems ISCAS 2004 This tutorial defined the structure of the book but as first time authors editors we had a lot to learn about the logistics of putting together information from multiple sources Needless to say it was a long road between the tutorial and the book and it took more than a few months to complete We hope that you will find our journey worthwhile and the collated information useful The laboratories of the authors are located at many universities distributed around the world Their unifying theme however is the advancement of knowledge for the development of systems for CMOS imaging and image processing We hope that this book will highlight the ideas that have been pioneered by the authors while providing a roadmap for new practitioners in this field to exploit exciting opportunities to integrate imaging and smartness on a single VLSI chip The potential of these smart imaging systems is still unfulfilled Hence there is still plenty of research and development to be done **CMOS/CCD Sensors and Camera Systems** Gerald C.
