management has had a great dissemination in the last decades especially for the adoption of management systems standard. Given that the issues of energy is increasing to a greater extent in the recent years ISO develops ISO 50001 Energy Management System EnMS. The ISO 50001 standard was published on July 2011 and it has grown significantly worldwide ever since. This standard is expected to give a big impact in energy management and it is estimated that the standard could influence up to 60 % of the world's energy use. ISO 50001 established a framework for energy management systems not only for industrial plants but also for commercial institutional governmental facilities and entire organizations. This book summarizes the results of a study conducted by the University of Girona UdG and University of the Basque Country UPV EHU aimed at analyzing the impact of ISO 50001 standard in Spain. *Global Impact Estimation of ISO 50001 Energy Management System for Industrial and Service Sectors*, 2016. A methodology has been developed to determine the impacts of ISO 50001 Energy Management System EnMS at a region or country level. The impacts of ISO 50001 EnMS include energy CO2 emissions and cost savings. This internationally recognized and transparent methodology has been embodied in a user friendly Microsoft Excel based tool called ISO 50001 Impact Estimator Tool IET 50001. However the tool inputs are critical in order to get accurate and defensible results. This report is intended to document the data sources used and assumptions made to calculate the global impact of ISO 50001 EnMS.
