Future Communication Technology and Engineering Kennis Chan,2015-04-06 This volume contains the papers presented at the 2014 International Conference on Future Communication Technology and Engineering FCTE2014 taking place in Shenzhen China from 16 17 November 2014 Communication technologies are developing quickly and there are more possibilities for future communication technologies provided by the achievements made rather than limitations At the convention innovative and inspiring ideas were presented certain controversial topics were discussed e g what are the most efficient convenient methods for information communication and what is the most probable prospect for future communication technology It is difficult to make any definite conclusions from these presentations and discussions but the desire and drive for improvement and development shown by the participants authors are surely remarkable and respectable In this book 70 papers are included chosen from hundreds of submissions contributed by scientists from various countries and regions after careful reading and discussing by a team of reviewers These papers cover almost every possible aspect of communication technology including communication systems automation and control engineering electrical engineering AI algorithms signal processing data mining and knowledge based systems The What and How of Modelling Information and Knowledge C. Maria Keet,2023-11-17

The main aim of this book is to introduce a group of models and modelling of information and knowledge comprehensibly Such models and the processes for how to create them help to improve the skills to analyse and structure thoughts and ideas to become more precise to gain a deeper understanding of the matter being modelled and to assist with specific tasks where modelling helps such as reading comprehension and summarisation of text The book draws ideas and transferrable approaches from the plethora of types of models and the methods techniques tools procedures and methodologies to create them in computer science This book covers five principal declarative modelling approaches to model information and knowledge for different yet related purposes It starts with entry level mind mapping to proceed to biological models and diagrams onward to conceptual data models in software development and from there to ontologies in artificial intelligence and all the way to ontology in philosophy Each successive chapter about a type of model solves limitations of the preceding one and turns up the analytical skills a notch These what and how for each type of model is followed by an integrative chapter that ties them together comparing their strengths and key characteristics ethics in modelling and how to design a modelling language In so doing we ll address key questions such as what type of models are there How do you build one What can you do with a model Which type of model is best for what purpose Why do all that modelling The intended audience for this book is professionals students and academics in disciplines where systematic information modelling and knowledge representation is much less common than in computing such as in commerce biology law and humanities And if a computer science student or a software developer needs a quick refresher on conceptual data models or a short solid overview of ontologies then this book will serve them well Army of None Paul Scharre,2018-04-24
