Assessing Library Space for Learning Susan E. Montgomery, 2017-08-01 With the surge in electronic access to the

library's resources there has been an ongoing discussion about the need for a physical library building. On a college or university campus the library is a destination for its users. Students, faculty, and staff go to the library for various reasons. Their usage makes the academic library a valuable learning space on campus. However, not much is known about how the library space contributes to user learning. In *Assessing Library Space for Learning*, chapters discuss library usage at academic institutions and how that usage is an integral part of the student learning experience. Included are the perspectives of an architect who is tasked with designing library spaces with learning in mind, a psychologist whose professional research focuses on the concept of place, and a dynamic group of academic librarians who are dedicated to making the library conducive to the needs of their learners. This book is a combination of theory, practical, and research-based chapters with an overall focus on the intersection of library space and learning. The authors demonstrate the importance of the library space in our users' lives. In addition, the authors discuss the importance of determining ways to learn how library space contributes to user learning. Readers will gain an understanding of the library space as a valuable learning space and the steps librarians need to take to assess learning in the academic library.

The Public Space of Social Media Therese Tierney, 2013-08-29
Social media is restructuring urban practices through ad hoc experimentation, commercial software development, and communities of participation. This book is the first to consider how practices contained within social media are situated within a larger genealogy of public space, including theories of communal identity, *civitas*, and democracy, the *fete*, and self-expression. Through empirical research, the actual social practices of participants of networked publics are described and analyzed. Documenting how online counterpublics use the Internet to transmit classified photos, mobilize activists, and challenge the status quo, Tierney argues that online activities do not stop in online conversations; they are physically grounded through mobile GPS coordinates which are then transformed into activities in physical space: the street, the plaza, the places where people have traditionally gathered to demonstrate and express their opinions publicly.

Strategic Spatial Projects Stijn Oosterlynck, Jef Van den Broeck, Louis Albrechts, Frank Moulaert, Ann Verhetsel, 2010-11-18
Strategic Spatial Projects presents four years of case study research and theoretical discussions on strategic spatial projects in Europe and North America. It takes the position that planning is not well equipped to take on its current challenges if it is considered as only a regulatory and administrative activity. There is an urgent need to develop a mode of planning that aims to innovate in spatial as well as social terms. This timely important book is for spatial planning, urban design, and community development and policy studies courses. For academics, researchers, and students in planning, urban design, urban studies, human and economic geography, public administration, and policy studies.

Analogical Thinking in Architecture Jean-Pierre Chupin, 2023-07-27
This book provides an in-depth exploration of the rich and persistent use of analogical thinking in the built environment. Since the turn of the 21st century, design thinking has permeated many fields outside of the design disciplines. It is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box. This book argues that

these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories
