**Information** Hans Christian Von Baeyer,2003 The nuclear age has morphed into the information age Information is a cool sexy word using it makes you feel smart It proves that you are plugged in and technologically sophisticated Information is unquestionably in But what is information Is it a scientifically useful concept The slow emergence of the notion of information during the 20th century contrasts sharply with the birth of the energy concept as in the 19th Then in the brief span of 20 years energy was invented defined and established as a key element of physics and more generally of science We don t know what energy is but we can describe it mathematically measure it accurately even market regulate and tax it In this work Professor von Baeyer shows how information is becoming just as robust and just as central to physics and biology as energy is today It is he says poised to replace matter as the primary stuff of the universe stuff that flows out of a tangible object like a piano or a book or an atom and after a tortuous sequence of metamorphoses involving the senses lodges in the conscious brain

**Knowing Nature in Early Modern Europe** David Beck,2015-10-06 Today we are used to clear divisions between science and the arts But early modern thinkers had no such distinctions with knowledge being a truly interdisciplinary pursuit Each chapter of this collection presents a case study from a different area of knowledge The Earth Is Our Home Nelson Rivera,2016-11-14 This book demonstrates that Mary Midgley s philosophy of evolution points the way towards considering the earth as our only true home since we are products of this planet and its evolving and complex life along with every other organism From the knowledge of ourselves as knowing animals with a biological as well as a cultural history Midgley proposes the elaboration of an evolutionary epistemology that situates us firmly on the earth together with other creatures while at the same time helping us to build knowledge of the world from the complexity of the human experience I like to call this approach by a known theological analogy a view from below that is from the underside of the world from the realms of nature and history Such an approach does not begin by assuming conceptions of design or order in nature a view that we term from above although it does not rule out the possibility of teleological or metaphysical constructions of reality in the long run This down to earth approach I consider essential for any philosophy or theology that wants to take evolutionary theory seriously while committed to a proper and non dismissive assessment of religious views
