Horn,Charles R. Johnson,1994-06-24 Building on the foundations of its predecessor volume Matrix Analysis this book treats in detail several topics in matrix theory not included in the previous volume but with important applications and of special mathematical interest As with the previous volume the authors assume a background knowledge of elementary linear algebra and rudimentary analytical concepts Many examples and exercises of varying difficulty are included *Inverse Problems and Zero Forcing for Graphs* Leslie Hogben,Jephian C.-H. Lin,Bryan L. Shader,2022-07-21 This book provides an introduction to the inverse eigenvalue problem for graphs IEP G and the related area of zero forcing propagation and throttling The IEP G grew from the intersection of linear algebra and combinatorics and has given rise to both a rich set of deep problems in that area as well as a breadth of ancillary problems in related areas The IEP G asks a fundamental mathematical question expressed in terms of linear algebra and graph theory but the significance of such questions goes beyond these two areas as particular instances of the IEP G also appear as major research problems in other fields of mathematics sciences and engineering One approach to the IEP G is through rank minimization a relevant problem in itself and with a large number of applications During the past 10 years important developments on the rank minimization problem particularly in relation to zero forcing have led to significant advances in the IEP G The monograph serves as an entry point and valuable resource that will stimulate future developments in this active and mathematically diverse research area
