your ideal career with the realities of your life **Equipment Management in the Post-Maintenance Era** Kern
Peng, 2021-11-08 Recent advancements in information systems and computer technology have led to developments in
equipment and robotic technology that have permanently changed the characteristics of manufacturing equipment
Equipment Management in the Post Maintenance Era Advancing in the Era of Smart Machines introduces a new way of
thinking to help high tech organizations manage an increasingly complex equipment base It also facilitates the fundamental
understanding of equipment management those in traditional industries will need to prepare for the emerging microchip era
in equipment Kern Peng shares insights gained through decades of managing equipment performance Using a systems model
to analyze equipment management he introduces alternatives in equipment management that are currently gaining
momentum in high tech industries The book highlights the fundamental internal flaw in maintenance organizational setup
presents new approaches to replace maintenance functional setup and illustrates a time tested transformation and
implementation process to help transition your organization from the maintenance era to the new post maintenance era
Fundamentally it Breaks down the history of equipment into five phases Provides a clear understanding of equipment
management fundamentals and Introduces alternatives in equipment management beyond the mainstream principles of
maintenance management More specifically the book examines maintenance management logistics including planning and
budgeting training and people development customer services and management vendor management and inventory
management Supplying a comprehensive look at the history of equipment management it analyzes current maintenance
practice and details approaches that can significantly improve the effectiveness and efficiency of your equipment
management well into the future This second edition addresses the role of the development of the Internet of Things IoT and
significant advancements in artificial intelligence AI and machine learning ML in enabling a new generation of smart

machines which have in turn laid the foundation for Industry 4.0 Equipment utilizing IoT and sensors can monitor components and allow them to be serviced at an exact time without the need for a preventive maintenance schedule. Moreover, equipment replacement rarely occurs at the end of the piece of equipment's natural life; rather, replacement is driven by the introduction of new technologies and products, all of which lead to less maintenance activities and reduce the importance of the traditional maintenance function. Maintenance departments today operate with fewer employees and smaller budgets. At a point when machines are smart enough to keep themselves running or equipment is rendered obsolete by better equipment in a short time, such as with computers and cellphones, companies do not need a maintenance department. This updated edition reiterates the importance of transitioning to the post-maintenance era to effectively manage today's sophisticated, smart yet expensive equipment. Many changes the author predicted a decade ago are accelerating in the IoT era. Equipment management is moving further away from the maintenance era and advancing deeper into the post-maintenance era. The trend for smart machines is very clear, and companies that do not upgrade their equipment will lose their competitiveness. As equipment and factories become smarter, companies must change their practices and organizational structures to manage the new generation of equipment for Industry 4.0.

Although other publications discuss and analyze security, none focus on both the professional and personal perspectives of this critical industry. Editor Dale L. June shares his vast knowledge and lucid insight into the business of protection.
