Weber, Martin Schöfl, Susanne Seifert, Natalie Förster, 2025-12-01 School entry is a critical life event for young children. Students begin this new phase of their lives with very different abilities due to their individual characteristics, previous experiences, and education. While some children hardly know any letters or numbers, others can already read, write, and calculate quite fluently. To optimally support young learners according to their respective starting conditions, teachers must recognize students' learning prerequisites and adapt instruction to students' needs. To this end, both valid and economical assessments as well as effective and differentiated interventions are needed. This Research Topic addresses new developments in early assessments and assessment-based interventions around the time of school entry, from the last year before enrollment until second grade. In particular, this Research Topic aims to bring together research that directly contributes to assessing children's difficulties and providing evidence-based support. We highly welcome new innovative approaches from the fields of education, didactics, and psychology that focus on the assessment and assessment-based instruction in reading, writing, and maths. Any empirical studies that help to improve the assessment and assessment-based interventions for the competencies mentioned are welcome. We are looking for empirical quantitative or qualitative studies dealing with the target group of children around the age of school entry, last year of kindergarten to second grade elementary school, that include at least one of the following topics: the presentation or testing of new assessment procedures that focus on performance in and prerequisites for reading, writing, and maths; assessment-based interventions, both whole class or individual approaches in reading, writing, and maths; the co-development of sub-skills in reading, writing, and maths; and consequences for assessment and intervention. Please note that manuscripts without prior submission of an abstract will not be considered for the research topic.

Space, Imagination and the Cosmos from Antiquity to the Early Modern Period Frederik A. Bakker, Delphine Bellis, Carla Rita Palmerino, 2019-02-05

This volume provides a much-needed, historically accurate narrative of the development of theories of space up to the beginning of the eighteenth century. It studies conceptions of space that were implicitly or explicitly entailed by ancient, medieval, and early modern representations of the cosmos. The authors reassess Alexandre Koyr's groundbreaking work *From the Closed World to the Infinite Universe* (1957) and trace the permanence of arguments to be found throughout the Middle Ages and beyond. By adopting a long timescale, this book sheds new light on the continuity between various cosmological representations and their impact on the ontology and epistemology of space. Readers may explore the work of a variety of authors, including Aristotle, Epicurus, Henry of Ghent, John Duns Scotus, John Wyclif, Peter Auriol, Nicholas Bonet,

Francisco Suarez Francesco Patrizi Giordano Bruno Libert Froidmont Marin Mersenne Pierre Gassendi Gottfried Wilhelm Leibniz and Samuel Clarke We see how reflections on space imagination and the cosmos were the product of a plurality of philosophical traditions that found themselves confronted with and enriched by various scientific and theological challenges which induced multiple conceptual adaptations and innovations This volume is a useful resource for historians of philosophy those with an interest in the history of science and particularly those seeking to understand the historical background of the philosophy of space *Annual Editions: the Family* Kathleen R. Sensibility in the Early Modern Era Anik Waldow, 2018-02-02 Sensibility in the Early Modern Era investigates how the early modern characterisation of sensibility as a natural property of the body could give way to complex considerations about the importance of affect in morality What underlies this understanding of sensibility is the attempt to fuse Lockean sensationism with Scottish sentimentalism being able to have experiences of objects in the world is here seen as being grounded in the same principle that also enables us to feel moral sentiments Moral and epistemic ways of relating to the world thus blend into one another as both can be traced to the same capacity that enables us to affectively respond to stimuli that impinge on our perceptual apparatus This collection focuses on these connections by offering reflections on the role of sensibility in the early modern attempt to think of the human being as a special kind of sensitive machine and affectively responsive animal Humans as they are understood in this context relate to themselves by sensing themselves and perpetually refining their intellectual and moral capacities in response to the way the world affects them Responding to the world here refers to the manner in which both natural and man made influences impact on our ability to conceptualise the animate and inanimate world and our place within that world This book was originally published as a special issue of the *Intellectual History Review*
