Kjeldskov,2022-05-31 This book presents a contextual approach to designing contemporary interactive mobile computer systems as integral parts of ubiquitous computing environments Interactive mobile systems services and devices have

become functional design objects that we care deeply about. Although their look, feel, and features impact our everyday lives as we orchestrate them in concert with a plethora of other computing technologies, these artifacts are not well understood or created through traditional methods of user-centered design and usability engineering. Contrary to more traditional IT artifacts, they constitute holistic user experiences of value and pleasure that require careful attention to the variety, complexity, and dynamics of their usage. Hence, the design of mobile interactions proposed in this book transcends existing approaches by using the ensemble of form and context as its central unit of analysis. As such, it promotes a designerly way of achieving convergence between form and context through a contextually grounded wholeness-sensitive and continually unfolding process of design.

Spaces of Interaction, Places for Experience David Benyon, 2022-06-01 *Spaces of Interaction: Places for Experience* is a book about Human-Computer Interaction (HCI), interaction design, ID, and user experience (UX) in the age of ubiquitous computing. The book explores interaction and experience through the different spaces that contribute to interaction until it arrives at an understanding of the rich and complex places for experience that will be the focus of the next period for interaction design. The book begins by looking at the multilayered nature of interaction and UX, not just with new technologies but with technologies that are embedded in the world. People inhabit a medium or rather many media which allow them to extend themselves physically, mentally, and emotionally in many directions. The medium that people inhabit includes physical and semiotic material that combine to create user experiences. People feel more or less present in these media and more or less engaged with the content of the media. From this understanding of people in media, the book explores some philosophical and practical issues about designing interactions. The book journeys through the design of physical space, digital space, information space, conceptual space, and social space. It explores concepts of space and place, digital ecologies, information architecture, conceptual blending, and technology spaces at work and in the home. It discusses navigation of spaces and how people explore and find their way through environments. Finally, the book arrives at the concept of a blended space where the physical and digital are tightly interwoven and people experience the blended space as a whole. The design

of blended spaces needs to be driven by an understanding of the correspondences between the physical and the digital by an understanding of conceptual blending and by the desire to design at a human scale There is no doubt that HCI and ID are changing The design of microinteractions remains important but there is a bigger picture to consider UX is spread across devices over time and across physical spaces The commingling of the physical and the digital in blended spaces leads to new social spaces and new conceptual spaces UX concerns the navigation of these spaces as much as it concerns the design of buttons and screens for apps By taking a spatial perspective on interaction the book provides new insights into the evolving nature of interaction design
