Structural Time Series Models Iasris:

Forecasting, Structural Time Series Models and the Kalman Filter Andrew C. Harvey, 1990-02-22 In this book Andrew Harvey sets out to provide a unified and comprehensive theory of structural time series models Unlike the traditional ARIMA models structural time series models consist explicitly of unobserved components such as trends and seasonals which have a direct interpretation As a result the model selection methodology associated with structural models is much closer to econometric methodology The link with econometrics is made even closer by the natural way in which the models can be extended to include explanatory variables and to cope with multivariate time series From the technical point of view state space models and the Kalman filter play a key role in the statistical treatment of structural time series models The book includes a detailed treatment of the Kalman filter This technique was originally developed in control engineering but is becoming increasingly important in fields such as economics and operations research This book is concerned primarily with modelling economic and social time series and with addressing the special problems which the treatment of such series poses The properties of the models and the methodological techniques used to select them are illustrated with various applications These range from the modelling of trends and cycles in US macroeconomic time series to to an evaluation of the effects of seat belt legislation in the UK

Forecasting, Structural Time Series Models & the Kalman Filter Andrew C. Harvey, 2014-05-18 This book provides a synthesis of concepts and materials that ordinarily appear separately in time series and econometrics literature presenting a comprehensive review of both theoretical and applied concepts Perhaps the most novel feature of the book is its use of Kalman filtering together with econometric and time series methodology From a technical point of view state space models and the Kalman filter play a key role in the statistical treatment of structural time series models This technique was originally developed in control engineering but is becoming increasingly important in economics and operations research The book is primarily concerned with modeling economic and social time series and with addressing the special problems that the treatment of such series pose

[Introduction to Multiple Time Series Analysis](#) Helmut Lütkepohl, 1993-08-13 This graduate level textbook deals with analyzing and forecasting multiple time series It considers a wide range of multiple time series models and methods The models include vector autoregressive vector autoregressive moving average cointegrated and periodic processes as well as state space and dynamic simultaneous equations models Least squares maximum likelihood and Bayesian methods are considered for estimating these models Different procedures for model selection or specification are treated and a range of tests and criteria for evaluating the adequacy of a chosen model are introduced The choice of point and interval forecasts is considered and impulse response analysis dynamic multipliers as well as innovation accounting are presented as tools for structural analysis within the multiple time series context This book is accessible to graduate students in business and economics In addition multiple time series courses in other fields such as statistics and engineering may be based on this book Applied researchers involved in

analyzing multiple time series may benefit from the book as it provides the background and tools for their task It enables the reader to perform his or her analyses in a gap to the difficult technical literature on the topic

Time Series Analysis by State Space Methods James Durbin,Siem Jan Koopman,2012-05-03 This is a comprehensive treatment of the state space approach to time series analysis A distinguishing feature of state space time series models is that observations are regarded as made up of distinct components which are each modelled separately

Structural Time Series Models and the Kalman Filter João Tovar Jalles,2022 The continued increase in availability of economic data in recent years and more importantly the possibility to construct larger frequency time series have fostered the use and development of statistical and econometric techniques to treat them more accurately This paper presents an exposition of structural time series models by which a time series can be decomposed as the sum of a trend seasonal and irregular components In addition to a detailed analysis of univariate specifications we also address the SUTSE multivariate case and the issue of cointegration Finally the recursive estimation and smoothing by means of the Kalman filter algorithm is described taking into account its different stages from initialisation to parameters estimation

Time Series Analysis by State Space Methods James Durbin,Siem Jan Koopman,2001-06-21 State space time series analysis emerged in the 1960s in engineering but its applications have spread to other fields Durbin statistics London School of Economics and Political Science and Koopman econometrics Free U Amsterdam extol the virtues of such models over the main analytical system currently used for time series data Box Jenkins ARIMA What distinguishes state space time models is that they separately model components such as trend seasonal regression elements and disturbance terms Part I focuses on traditional and new techniques based on the linear Gaussian model Part II presents new material extending the state space model to non Gaussian observations

Time Series for Data Science Wayne A. Woodward,Bivin Philip Sadler,Stephen Robertson,2022-08-01 Data Science students and practitioners want to find a forecast that works and don't want to be constrained to a single forecasting strategy *Time Series for Data Science Analysis and Forecasting* discusses techniques of ensemble modelling for combining information from several strategies Covering time series regression models exponential smoothing Holt Winters forecasting and Neural Networks It places a particular emphasis on classical ARMA and ARIMA

models that is often lacking from other textbooks on the subject This book is an accessible guide that doesn't require a background in calculus to be engaging but does not shy away from deeper explanations of the techniques discussed Features Provides a thorough coverage and comparison of a wide array of time series models and methods Exponential Smoothing Holt Winters ARMA and ARIMA deep learning models including RNNs LSTMs GRUs and ensemble models composed of combinations of these models Introduces the factor table representation of ARMA and ARIMA models This representation is not available in any other book at this level and is extremely useful in both practice and pedagogy Uses real world examples that can be readily found via web links from sources such as the US Bureau of Statistics Department of Transportation and the World Bank There is an accompanying R package that is easy to use and requires little or no previous R experience The package implements the wide variety of models and methods presented in the book and has tremendous pedagogical use

Introduction to Time Series and Forecasting Peter J. Brockwell, Richard A. Davis, 2013-03-14 Some of the key mathematical results are stated without proof in order to make the underlying theory accessible to a wider audience The book assumes a knowledge only of basic calculus matrix algebra and elementary statistics The emphasis is on methods and the analysis of data sets The logic and tools of model building for stationary and non stationary time series are developed in detail and numerous exercises many of which make use of the included computer package provide the reader with ample opportunity to develop skills in this area The core of the book covers stationary processes ARMA and ARIMA processes multivariate time series and state space models with an optional chapter on spectral analysis Additional topics include harmonic regression the Burg and Hannan Rissanen algorithms unit roots regression with ARMA errors structural models the EM algorithm generalized state space models with applications to time series of count data exponential smoothing the Holt Winters and ARAR forecasting algorithms transfer function models and intervention analysis Brief introductions are also given to cointegration and to non linear continuous time and long memory models The time series package included in the back of the book is a slightly modified version of the package ITSM published separately as ITSM for Windows by Springer Verlag 1994 It does not handle such large data sets as ITSM for Windows but like the latter runs on IBM PC compatible computers under either DOS or Windows version 3.1 or later The programs are all menu driven so that the reader can immediately apply the techniques in the book to time series data with a minimal investment of time in the computational and algorithmic aspects of the analysis

Predicting the Present with Bayesian Structural Time Series Steven L. Scott,2013 This article describes a system for short term forecasting based on an ensemble prediction that averages over different combinations of predictors The system combines a structural time series model for the target series with regression component capturing the contributions of contemporaneous search query data A spike and slab prior on the regression coefficients induces sparsity dramatically reducing the size of the regression problem Our system averages over potential contributions from a very large set of models and gives easily digested reports of which coefficients are likely to be important We illustrate with applications to initial claims for unemployment benefits and to retail sales Although our exposition focuses on using search engine data to forecast economic time series the underlying statistical methods can be applied to more general short term forecasting with large numbers of contemporaneous predictors
