Static Load Balancing Algorithms In Cloud Computing:

Comparative Analysis of Load Balancing Algorithms in Cloud Computing Mohit Tomar, 2017 Abstract Cloud computing is a novel trend emerging in Information Technology IT environments with immense infrastructure and resources An integral aspect of cloud computing is load balancing Efficient load balancing in cloud computing ensures effective resource utilization There are two types of load balancers the static load balancer and the dynamic load balancer While both types of load balancers are widely used in the industry they differ in performance In this project the performances of the most widely used static and dynamic load balancers namely the round robin and the throttled are compared Specifically the project examines whether the throttled algorithm takes less time than the round robin algorithm to access data in cloud computing The results show that the throttled algorithm takes less time than the round robin algorithm to access data and that this difference is due to a faultiness in the implementation of the round robin algorithm Cloud Computing and Security Xingming Sun, Han-Chieh Chao, Xingang You, Elisa Bertino, 2017-10-30 This two volume set LNCS 10602 and LNCS 10603 constitutes the thoroughly refereed post conference proceedings of the Third International Conference on Cloud Computing and Security ICCCS 2017 held in Nanjing China in June 2017 The 116 full papers and 11 short papers of these volumes were carefully reviewed and selected from 391 submissions The papers are organized in topical sections such as information hiding cloud computing IOT applications information security multimedia applications optimization and classification **Proceedings of Fifth International Conference on Computing, Communications, and Cyber-Security** Sudeep Tanwar, Pradeep Kumar Singh, Maria Ganzha, Gregory Epiphaniou, 2024-07-30 This book features selected research papers presented at the Fifth International Conference on Computing Communications and Cyber Security IC4S 05 organized in India during 29 February to 1 March 2024 The conference was hosted at SMVDU Katra J K India It includes innovative work from researchers leading innovators and professionals in the areas of communication and network technologies advanced computing technologies data analytics and intelligent learning the latest electrical and electronics trends and security and privacy issues The work is presented in two volumes Recent Advances in Computing Sciences Manmohan Sharma, Mintu Nath, Sophiya Sheikh, Amar Singh, 2025-01-27 The 2nd International Conference on Recent Advances in Computing Sciences RACS was held from 29th to 30th November 2022 at Lovely Professional University Jalandhar India The conference focused on discussing issues exchanging ideas and the most recent innovations towards advancing research in the field of Computing Sciences and Technology All technical sessions were predominantly related to Data Science Artificial intelligence Remote Sensing Image Processing Computer Vision Data Forensics Cyber Security Computational Sciences Simulation and modeling Business Analytics and Machine Learning **Cloud Computing Applications and Techniques for E-Commerce** Gochhait, Saikat, Shou, David Tawei, Fazalbhoy, Sabiha, 2019-12-27 Many professional fields have been affected by the rapid growth of technology and information Included in this are the business and management markets as the implementation of e commerce

Performance Study of Load Balancing Algorithm in Cloud Computing Zhnova Adnan Obaid, 2017. Cloud computing is one of the information technology latest developments that achieved a huge success and it has taken over the technology world. This is due to its ability to provide a broad range of users to access vast amount of virtualized resources, scalable services, and storage service via using the Internet. Load balancing is an important part functionality of cloud computing because of its ability to stabilize the load and provide maximum optimization. Therefore, it comes with no surprise that it requires a lot of attention and study. During the course of many years, vast amount of load balancing algorithms have been developed while some of them were instant success, some of them were not. It is important to investigate and examine these algorithms to compare, contrast, and to determine which algorithm works with what. This research project is going to study different types of load balancing algorithms such as RR, Random, No load balancer, Max min, Min min, etc. By analyzing the result that is obtained from the simulation from the Riverbed Modeler software to discover and to choose best ways for resource utilization and an efficient load balancing algorithm.

Load Balancing Algorithms in Cloud Computing Vignesh Joshi, 2020. Cloud computing plays an important role in enhancing the effective sharing of resources in virtual machines. Scheduling and load balancing are the two common concepts that cloud computing relies on, ensuring that a prescribed task is assigned to the most appropriate virtual machine. Also, cloud computing should have the ability to handle multiple independent tasks that are arriving and execute them in the same or multiple nodes. In a heterogeneous environment, static and dynamic scheduling plays an important role by enhancing the allocation of tasks to the appropriate resources to satisfy the internet users requests and

making cloud computing technology more efficient This work aims to evaluate and discuss important algorithms that will help improve the load balancing performance of cloud systems

A Comparison of Select Load Balancing Algorithms in Cloud Computing Varsha Thakur,2015 This paper compares the performances of three algorithms with different service broker policies namely Round Robin Equally Spread Current Execution ESCE and Throttled Load Balancing CloudSim and CloudSim based tool are used for simulation The results reveal that Throttled load balancing algorithm with optimistic service broker policy is superior to others However from the cost point of view Round Robin under closest service broker policy is most cost effective due to little migration overheads

Comparative Study of Load Balancing Algorithms in Cloud Computing for Wired and Wireless Networks Rasti Qasim Ali,2018 Cloud computing is emerging as a modern paradigm for the purpose of accessing manipulating and configuring large scale distributed applications through the Internet The load on the cloud is evolving with the development of new applications in parallel Load balancing algorithms improve the workload to be distributed equally across all nodes and prevents the situation in which some nodes become overloaded while others have the lowest load at the time when a request is made Performance parameters just like CPU utilization and Processing Delay have been studied in order to achieve a higher user satisfaction and resource allocation ratio and ensures that all computing applications perform the same amount of work in the equal time Load balancing is an ideal solution to evenly distribute the load across all the servers by using different types of load balancing algorithms The deployment of cloud computing raises so many challenge tasks such as resource management request handling in cloud environment and the most important one is how to balance load in cloud computing In this project in order to solve the problem of network congestions some load balancing algorithms have been used with the use of a load balancer in two types of technologies wired and wireless OPNET modeler has been used to examine the used load balancing algorithms for different scenarios Moreover the performance of some parameters has been obtained such as CPU utilization on both load balancer and the servers and the processing delay on the load balancer A deep analysis was conducted to investigate these parameters of performance and well studied comparison is achieved The numerical results proved that using a load balancer decreases the CPU utilization and load on the servers
