Aircraft Design Ajoy Kumar Kundu,2010-04-12 Aircraft Design explores fixed winged aircraft design at the conceptual phase of a project Designing an aircraft is a complex multifaceted process embracing many technical challenges in a multidisciplinary environment By definition the topic requires intelligent use of aerodynamic knowledge to configure aircraft geometry suited specifically to the customer's demands It involves estimating aircraft weight and drag and computing the available thrust from the engine The methodology shown here includes formal sizing of the aircraft engine matching and substantiating performance to comply with the customer's demands and government regulatory standards Associated topics include safety issues environmental issues material choice structural layout understanding flight deck avionics and systems for both civilian and military aircraft Cost estimation and manufacturing considerations are also discussed The chapters are arranged to optimize understanding of industrial approaches to aircraft design methodology Example exercises from the author's industrial experience dealing with a typical aircraft design are included

Safety in Aviation and Astronautics Simon Ashley Bennett,2021-11-25 Aviation safety and astronautics safety are taught as technical subjects informed for the most part by quantitative methods Here as in other

fields safety is often framed as an engineering problem requiring mathematics informed solutions This book argues that the socio technical approach encompassing theories grounded in sociology and psychology such as active learning high reliability organising mindfulness leadership followership and empowerment has much to contribute to the safety performance of these vital industries It sets out to inspire professionals to embed the whole system approach into design and operation regimen and describes the reputational and financial benefits to manufacturers and operators that accrue from adopting a whole system approach to design and operation The book defines the socio technical approach to risk assessment and management in aviation and astronautics astronautics is taken to mean the design and operation of vehicles for use beyond the earth s atmosphere then demonstrates the strengths and weaknesses of this approach through case studies of for example the Boeing 737MAX 8 accidents and the loss of the SpaceShipTwo orbiter Grounding the discourse in familiar case studies engages busy aviation and astronautics professionals The book s arguments are explained in such a way that they are readily comprehensible to non experts Key concepts are defined within a glossary Photographs charts and diagrams illustrate key points Written for a practitioner audience specifically aviation and astronautics professionals this book provides a valuable and accessible social sciences perspective on safety that will be directly relevant to their roles

The Blame Machine Robert B. Whittingham, 2004 *The Blame Machine* describes how disasters and serious accidents result from recurring but potentially avoidable human errors It shows how such errors are preventable because they result from defective systems within a company From real incidents you will be able to identify common causes of human error and typical system deficiencies that have led to these errors On a larger scale you will be able to see where in the organisational or management systems failure occurred so that you can avoid them The book also describes the existence of a blame culture in many

organisations which focuses on individual human error whilst ignoring the system failures that caused it The book shows how this blame culture has in the case of a number of past accidents dominated the accident enquiry process hampering a proper investigation of the underlying causes Suggestions are made about how progress can be made to develop a more open culture in organisations both through better understanding of human error by managers and through increased public awareness of the issues The book brings together documentary evidence from recent major incidents from all around the world and within the Rail Water Aviation Shipping Chemical and Nuclear industries *Aviation Week & Space Technology*, 1991 *Quality* Donna C.
