Health 4.0: How Virtualization and Big Data are Revolutionizing Healthcare Christoph Thuemmler, Chunxue Bai, 2017-01-07 This book describes how the creation of new digital services through vertical and horizontal integration of data coming from sensors on top of existing legacy systems that has already had a major impact on industry is now extending to healthcare. The book describes the fourth industrial revolution, i.e. Health 4.0, which is based on virtualization and service aggregation. It shows how sensors, embedded systems, and cyber-physical systems are fundamentally changing the way industrial processes work, their business models, and how we consume, while also affecting the health and care domains. Chapters describe the technology behind the shift of point of care to point of need and away from hospitals and institutions; how care will be delivered virtually outside hospitals; that services will be tailored to individuals rather than being designed as statistical averages; that data analytics will be used to help patients to manage their chronic conditions with help of smart devices; and that pharmaceuticals will be interactive to help prevent adverse reactions. The topics presented will have an impact on a variety of healthcare stakeholders in a continuously global and hyper-connected world. Presents explanations of emerging topics as they relate to e-health such as Industry 4.0, Precision Medicine, Mobile Health, 5G, Big Data, and Cyber-physical systems. Provides overviews of technologies in addition to possible application scenarios and market conditions. Features comprehensive demographic and statistical coverage of Health 4.0 presented in a graphical manner.

The Delhi Model Jasmine Shah, 2024-12-15 The Delhi Model for the first time in independent India brought the issue of transforming public education and healthcare from the margins to the centre of Indian politics. It prioritizes investments in human capital development and better service delivery for all citizens while ensuring a social safety net for the most vulnerable. This book is the first such account of what the Delhi Model truly is, detailing its economic foundation and how it compares with other governance models in India, especially the Gujarat Model. Jasmine Shah, in this authoritative and research-backed account, unpacks the reforms undertaken by the AAP government in Delhi in six key sectors: education, health, air pollution, transport, electricity, and water, and the outcomes they resulted in. Analysing the policies and reforms laid down in the past decade, Jasmine draws out an ambitious road map for building a developed India by leveraging principles of the Delhi Model.

Alzheimer's Disease: New Beginnings George Perry, Jesús Avila, Paula I. Moreira, Aaron A. Sorensen, Massimo Tabaton, 2018-07-15. *Alzheimer's Disease: New Beginnings* focuses on the future promise for therapeutic breakthroughs in light of notable clinical trial failures. The volume editors used a combination of scientometric evaluations to determine the most promising new approaches as well as soliciting insights from leaders in each of the major areas of Alzheimer's disease research. By combining these two approaches they recruited authors from the entire outlook spectrum from those who feel an elusive breakthrough might still be a few well-placed tweaks away to those who feel that they are launching entirely new investigative paradigms. These scholars present an open-eyed path forward. Now is the most exciting period in this field as old dogmas make way for new insights from new approaches to clinical trials, improved biomarker-based diagnostics, population-based studies, prevention, metabolism, to further refinement of the role of inflammation, genetics, tau, and amyloid.
