semester Having spent the first part of the term doing mostly computational work they are unprepared for the rigors of  
conceptual thinking in an abstract setting that is frequently the focus of the second half of the course Holt s Linear Algebra  
with Applications blends computational and conceptual topics throughout Early treatment of conceptual topics in the context  
of Euclidean space gives students more time and a familiar setting in which to absorb them This organization also makes it  
possible to treat eigenvalues and eigenvectors earlier than in most texts Abstract vector spaces are introduced later once  
students have developed a solid conceptual foundation Concepts and topics are frequently accompanied by applications to  
provide context and motivation Because many students learn by example Linear Algebra with Applications provides a large  
number of representative examples over and above those used to introduce topics The text also has over 2500 exercises
