Biodegradable Polymers :

Advances in Biodegradable Polymers G. F. Moore, S. M. Saunders, 1998-02 In this report the factors which influence biodegradation are first explained Methods of testing and evaluating biodegradation are then described and compared The principles relative costs and practical applications of specific tests are outlined together with the position with respect to recognised standards The range of biodegradable polymers and polymer blends is then described including natural and synthetic products An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading

Handbook of Biodegradable Polymers Catia Bastioli, 2005 This book is a complete guide to polymers which degrade naturally once they are finished with This is an especially important topic at the moment as landfill space is getting less and other methods of recycling can be very costly This book discusses the different types of biodegradable polymers both naturally occurring and synthetic and how they are used and the mechanisms for degradation

Biodegradable Polymers David K. Platt, Rapra Technology Limited, 2006 Biodegradable polymers have experienced strong growth over the last three years and are set to make further inroads into markets traditionally dominated by conventional thermoplastics in future Four main classes of biodegradable polymers are analysed in this report polylactic acid PLA starch based polymers synthetic biodegradable polymers such as aromatic aliphatic co polyesters and polyhydroxyalkanoates PHA The report analyses their key performance properties applications development market drivers and future prospects Each product section also contains an estimate of market size by world region and end use market plus forecasts to 2010 There is also an analysis of key suppliers and their products

Biodegradable polymers for industrial applications Ray Smith, 2005-05-17 The vast majority of plastic products are made from petroleum based synthetic polymers that do not degrade in a landfill or in a compost like environment Therefore the disposal of these products poses a serious environmental problem An environmentally conscious alternative is to design synthesise polymers that are biodegradable Biodegradable polymers for industrial applications introduces the subject in part one by outlining the classification and development of biodegradable polymers with individual chapters on polyhydroxyalkanoates polyesteramides and thermoplastic starch biodegradable polymers and others The second part explores the materials available for the production of biodegradable polymers Polymers derived from sugars natural fibres renewable forest resources poly lactic acid and protein nanoparticle composites will be looked at in detail in this section Part three looks at the properties and mechanisms of degradation prefacing the subject with a chapter on current standards The final part explores opportunities for industrial applications with chapters on packing agriculture and biodegradable polycaprolactone foams in supercritical carbon dioxide Biodegradable polymers for industrial applications explores the fundamental concepts concerning the development of biodegradable polymers degradable polymers from sustainable sources degradation and properties and industrial applications It is an authoritative book that will be invaluable for academics researchers and policy makers in the industry

Biodegradable Polymers and Plastics Emo Chiellini, Roberto Solaro, 2003-10-31 Synthetic and semi synthetic polymeric materials were originally developed for their durability and resistance to all forms of degradation including biodegradation. Special performance characteristics are achieved in items derived therefrom through the control and maintenance of their molecular weight and functionality during the processing and under service conditions. Polymeric materials were and are currently widely accepted because of their ease of processability and amenability to provide a large variety of cost effective items that help enhancing the comfort and quality of life in the modern industrial society.

Handbook of Polymers for Pharmaceutical Technologies, Biodegradable Polymers Vijay Kumar Thakur, Manju Kumari Thakur, 2015-09-22 Polymers are one of the most fascinating materials of the present era finding their applications in almost every aspect of life. Polymers are either directly available in nature or are chemically synthesized and used depending upon the targeted applications. Advances in polymer science and the introduction of new polymers have resulted in the significant development of polymers with unique properties. Different kinds of polymers have been and will be one of the keys in several applications in many of the advanced pharmaceutical researches being carried out over the globe. This 4 part set of books contains precisely referenced chapters emphasizing different kinds of polymers with basic fundamentals and practicality for application in diverse pharmaceutical technologies. The volumes aim at explaining basics of polymers based materials from different resources and their chemistry along with practical applications which present a future direction in the pharmaceutical industry. Each volume offers deep insight into the subject being treated. Volume 1 Structure and Chemistry, Volume 2 Processing and Applications, Volume 3 Biodegradable Polymers, Volume 4 Bioactive and Compatible Synthetic Hybrid Polymers.

Biodegradable Polymers Manjari Sharma, 2021-04-15 This book is about development of biodegradable polymer alternatives which are required to save our reserves of fossil fuels and to save our mother earth from further environmental degradation. This book deals with the family of biodegradable polymers which have to be prepared with a novel idea of studying polymers with a Cradle to Grave approach. It touches upon basic materials which can be potential materials to prepare biodegradable polymers with their basic structures, properties, behaviour and limitations known till date. This book will help students in understanding various characterization techniques which can be used for the study of identification of functional group, structural properties, thermal behaviour, crystallographic nature, mechanical properties and morphological properties through FTIR, ATR for physico-chemical properties, DSC, TGA for thermal studies, XRD for crystallographic studies, SEM for morphological studies. It also provides an overview of various testing methods to analyse biodegradability including standard guideline for evaluation of biodegradation and compostability of polymer material through ASTM, ISO, EN standard methods.
