Environmental Sciences Matthew N. O. Sadiku, Uwakwe C. Chukwu, Olaniyi D. Olaleye, 2022-02-09 In a modern society it is easy to forget that our society depends largely on the environmental processes that govern our world Environment refers to an aggregate of surroundings in which living beings such as humans animals and plants live and non living things exist It includes air water land living organisms and materials surrounding us The environment is an important part of our daily lives Environmental issues are now part of every career path and employment area Environmental science is an interdisciplinary field that applies principles from all the known technologies and sciences to study the environment and provide solutions to environmental problems It is the study of how the earth works and how we can deal with the environmental issues we face There is an ever demanding need for experts in this field because the environment is responsible for making our world beautiful and habitable For this reason environmental science is now being taught at high schools and higher institutions of learning Education on environmental science will empower the youths to take an active role in the world in which they live

Advances in Computational and Bio-Engineering S. Jyothi, D. M. Mamatha, Suresh Chandra Satapathy, K. Srujan Raju, Margarita N. Favorskaya, 2020-07-06 This book gathers state of the art research in computational engineering and bioengineering to facilitate knowledge exchange between various scientific communities Computational engineering CE is a relatively new discipline that addresses the development and application of computational models and simulations often coupled with high performance computing to solve complex physical problems arising in engineering analysis and design in the context of natural phenomena Bioengineering BE is an important aspect of computational biology which aims to develop and use efficient algorithms data structures and visualization and communication tools to model biological systems Today engineering approaches are essential for biologists enabling them to analyse complex physiological processes as well as for the pharmaceutical industry to support drug discovery and development programmes *Proceedings of the Seminar on Environment Friendly Electric Power Generation*, **Swachh Bharat: From Sanitation to Cleaning up the Financial System** Dr. W. Shanthakumar, **Air Pollution XIII** C. A. Shiva Nagendra,2007 Artificial neural networks ANNs which are parallel computational models comprising of interconnected adaptive processing units neurons have the capability to predict accurately the dispersive behavior of vehicular pollutants under complex environmental conditions This book aims at describing step by step procedure for formulation and development of ANN based VP models considering meteorological and traffic parameters The model predictions are compared with existing line source deterministic statistical based models to establish the efficacy of the ANN technique in explaining frequent dispersion complexities in urban areas The book is very useful for hardcore professionals and researchers working in problems associated with urban air pollution management and control

Sustainable Agriculture in the Era of Climate Change Rajib Roychowdhury,Shuvasish Choudhury,Mirza Hasanuzzaman,Sangeeta Srivastava,2020-07-06 Under ongoing climate changes natural and cultivated habitats of major crops are being continuously disturbed Such conditions impose and exacerbate abiotic and biotic stressors Drought salinity flood cold heat heavy metals metalloids oxidants irradiation etc are important abiotic stressors while diseases and infections caused by plant pathogens such as fungal agents bacteria and viruses are major biotic stresses In many instances stresses have become the major limiting factor for agricultural productivity and exert detrimental role on growth and yield of the crops To help feed an ever increasing world population and to ensure global food security concerted efforts from scientists and researchers have identified strategies to manage and mitigate the impacts of climate induced stresses This book summarizing their findings is aimed at crop improvement beyond such kind of barriers by agronomic practices genetics breeding phenotyping etc and biotechnological applications including molecular markers QTL mapping genetic engineering transgenesis tissue culture various omics technologies and gene editing It will cover a wide range of topics under environmental challenges agronomy and agriculture processes and biotechnological approaches Additionally fundamental mechanisms and applied information on stress responses and tolerance will be discussed This book highlights problems and offers proper solutions for crop stress management with recent information and up to date citations We believe this book is suitable for scientists researchers and students working in the fields of agriculture plant science environmental biology and biotechnology

Soil and Water Conservation Frederick R. Troeh,James Arthur Hobbs,Roy Luther Donahue,2004 Written from an agronomic rather than an engineering perspective this introduction to soil and water conservation explores a full range of topics and environmental issues including some ignored or overlooked in other books on the subject Comprehensive up to date and accessible it considers the hazards posed by erosion sedimentation and pollution and describes the techniques

needed to conserve soil and maintain environmental quality Situations and examples are drawn from many places to represent a cross section of the soils climates and cultures of the world as well as the full scope of agricultural engineering mining and other uses of the land The volume covers conserving soil and water soil erosion and civilization geologic erosion and sedimentation water erosion and sedimentation wind erosion and deposition predicting soil loss soil surveys as a basis for land use planning cropping systems tillage practices for conservation conservation structures vegetating drastically disturbed areas pastureland rangeland and forestland management water conservation soil drainage irrigation and reclamation soil pollution water quality and pollution economics of soil and water conservation soil and water conservation agencies in the United States and soil and water conservation around the world For professionals that deal with soil and water conservation *Environment and Development* Jagbir Singh,2005 In the last 100 years mankind has managed to destroy much of what it took nature millions of years to create At no point in history has so much damage been done to our natural heritage in such a short amount of time If something needed to be done to stop this crime against our future generations then now is the time to act as with every passing day we are speeding towards a self inflicted doomsday What is killing our ecology and environment is generally known What we need are solutions and ways of implementing them This International Conference on Environment and Development Challenges and Opportunities held on March 4 6 2005 at the University of Delhi India is one such step The conference presented the most up to date ideas on solving problems both ecological and environmental which mankind has brought upon itself **Handbook on Environment Statistics** ,2002

Local Environmental Change and Society in Africa Mohamed Salih,2000-06-30 Social and natural scientists are currently obsessed with globalization but this has not been matched by an equal interest in the societal consequences of local environmental change Attention has thus been withdrawn from community and locality and transferred to global processes with an indifference to the reality of those at the receiving end of the social economic and political problems that globalization create Local reality is obscured and conditions are imposed that are often insensitive to or even distort local needs resource management and production systems The case studies presented here illustrate how environmental degradation has contributed to the distortion of local institutions and economies thus denying local communities the right to live in a productive and healthy environment The contributors highlight the seriousness of the difficulties involved in conflating national policies and local reality and imposing global policy instruments on local communities Understandably the case studies demonstrate that local communities resist putting their faith in environmental policies and plans imposed on them by global or national institutions that often deprive them of access to and control over their local environment
