

Airport Engineering

Planning and Design

To meet the rapidly growing demands for domestic and international air travel, civil (airport) engineers, are going to face the challenging job of developing new airports and improving and strengthening the existing ones to increase their capacity. Author's collective experience as an educator in India and other countries suggests that real challenge facing engineers of today and tomorrow is of methodology, evaluation and choice. Engineers should therefore be investigative and analytical in planning, design and maintenance of airport facilities to meet the requirements of capacity and level of service.

This book is written to meet above requirements and is based on latest recommendations of International Civil Aviation Organisation (ICAO), Canada, and Federal Aviation Agency (FAA), U.S.A. It is organised in 18 chapters starting with historical developments and terminology to planning, design and maintenance of airport facilities including terminal, runway, taxiway, aprons and visual aids. Chapters on Heliport, Vertiport, Sloport Drainage and Environmental Considerations are also included. This book is structured in such a way that examples and exercises form an integral part of the main text. Typical questions for practice and preparation for various competitive examinations are included in the end.

Latest material used for writeup of various chapters of the book will also provide basis for postgraduate teaching and research work in airport engineering. This book will serve as a basic and stimulative learning and research tool for graduate and postgraduate students, teachers, and practising engineers involved in planning, design and maintenance of airport facilities.

Prof. Subhash C. Saxena graduated in Civil Engineering from BIT, Ranchi University (1961) and obtained postgraduate degree in Transportation Engineering from University of Toronto, Canada (1964). He worked as a Pool (Research) Officer on return from Canada at Central Road Research Institute, New Delhi (1965-68).

Professor Saxena started his teaching career as a Lecturer of Civil Engineering at Roorkie University (Indian Institute of Technology, Roorkee) in 1967. He joined S.V. Regional College of Engineering & Technology, Surat as Asst. Professor in 1970. He was sent as an expert to Government of Tanzania by Government of India to start a new technical college at Dar es Salaam during 1974-1976.

Prof. Saxena worked as Professor of Civil Engineering at University of Sulaimania, Sulaimania, Iraq (1978-1981); University of Malaya, Kuala Lumpur (1981-1984); University of Dar es Salaam, Dar es Salaam, Tanzania (1984-1989); University of Zimbabwe, Bulawayo, Zimbabwe (1989-90); and Professor and Dean of Engineering Faculty of National University of Science and Technology, Bulawayo, Zimbabwe (1991-1995).

During his teaching career, besides teaching, he was actively involved in guiding and conducting research on flexible pavements and traffic engineering at above universities. His published work consists of 56 research/technical papers and four engineering books, *Jurnal Engineering* (1972), *A Textbook of Railway Engineering* (1975), *Traffic Planning & Design* (1989), and *Airport Engineering: Planning & Design* (2007).

Prof. Saxena is a Fellow of professional bodies such as American Society of Civil Engineers, Institution of Engineers (India), Institute of Zimbabwe Engineers, and Member of Indian Road Congress, Construction Institute, USA, Transportation & Development Institute, USA.

Precast Concrete Raft Units J.W. Bull, 2012-12-06 The use of precast concrete is a well established construction technique for beams floors panels piles walls and other structural elements The advantages of precasting include excellent quality control economical large scale production improved construction productivity especially in adverse weather conditions and immediate structure availability These advantages have been recognized for precast concrete raft pavement units since their introduction in the 1930s In the last ten years there has been a considerable increase in the use of raft units especially in their range of applications their analysis and their design However the description of these developments has been published in academic journals and conference proceedings which are not readily available to practising raft unit pavement design engineers Pavement design engineers are under increasing pressure to produce raft unit designs that are inexpensive long lasting and able to allow reorganization to accommodate changing use and uncertainty of future loading requirements This is the first book devoted to raft unit pavements and will become a standard work of reference

Concepts for the Development of a Nondestructive Testing and Evaluation System for Rigid Airfield Pavements Paul Thomas Foxworthy, 1985 This thesis develops a complete system for nondestructive testing and evaluation of rigid airfield pavements An extensive review of present destructive and nondestructive equipment and methodologies is made to form the basis for selection of the equipment and analytical model used in this research A brief description of the selected Dynatest Model 8000 Falling Weight Deflectometer and the ILLISLAB finite element computer

model is presented Three Air Force installations were chosen for in depth study of pavement response to FWD loads under a variety of environmental and geological conditions Techniques are presented to determine the location of maximum damage to rigid pavement slabs for one or any combination of aircraft and the validity of the calculated stresses is established through comparisons of measured and predicted deflections at joints Major study findings include 1 new designations for pavement features based on actual loading conditions 2 guidelines for planning and conducting large scale evaluations of major airfield systems 3 a computer based determination of E and K 4 joint behavior prediction under fluctuating temperatures and their effect on generated slab stresses 5 procedures to account for the annual distribution of traffic over the range of temperatures normally experienced at any facility 6 a simplistic means of estimating total past damage from aircraft operations and 7 development of computer programs to predict remaining structural life of rigid airfield pavements

Embracing the Tune of Appearance: An Psychological Symphony within **Airport Engineering By Saxena**

In some sort of taken by screens and the ceaseless chatter of immediate interaction, the melodic splendor and psychological symphony developed by the written term usually diminish in to the background, eclipsed by the persistent sound and interruptions that permeate our lives. Nevertheless, situated within the pages of **Airport Engineering By Saxena** a marvelous literary value full of organic emotions, lies an immersive symphony waiting to be embraced.
