scallops and abalone Success has been greatest with low trophic level species such as freshwater crawfishes and bivalve
mollusks where nature subsidizes the aquaculturist in many ways providing feed at low or no cost seed for culture systems
waste removal and so forth Species such as homarid lobsters penaeid shrimps and abalone may have complicated life cycles
relatively slow growth rates and other prob lems that have so far limited development of aquaculture of these high value high

commercial profitability of raising them in the United States Investment in aquaculture of crustaceans and mollusks in the
United States or by U S companies abroad has been extensive Yet only freshwater crawfishes and oysters have been cul

abalones are being cultured in the Orient where demand justifies expensive labor intensive culture systems Asian
