The Host in the Machine Angela Thomas-Jones, 2010-07-27 This text tackles online social networks by navigating these systems from the birth to the death of the digital self. The author begins by examining the creation of a virtual identity in online networks popularized by websites such as Facebook and Myspace. The book subsequently explores how the social self is intrinsic to how social, cultural, and professional relationships are discovered, forged, and maintained. The text journeys through the popular criticisms of social networking such as employee time-wasting, bullying, stalking, the alleged links between social networks and suicide, and the decline of a user's public image. The dissonance between the performance of the virtual and non-virtual selves and the offline issues that can ensue are contextualized by the social nature of these online networks. The discussion of this digital life ends by addressing the intricacies of becoming web-dead, which explores how a user removes their identity with finality from social networks and the entire web.
