

THERMODYNAMICS (HEAT TRANSFER)

Heat Transfer - is the movement of heat from one body to another by means of conduction, convection and radiation.

MODES OF HEAT TRANSFER

Conduction - is a mode of heat transfer in which heat is transferred by molecular interactions through bodies in contact.

Convection - is a mode of heat transfer in which heat is transferred due to the moving and motion of particles of a substance

Free Convection - the substance moves because of the decrease in its density which is caused by increase in temperature

Forced Convection - the substance moves because of the application of mechanical power such as that of a fan.

Radiation - is a mode of heat transfer in which heat is transferred between bodies by energy propagating electromagnetic waves.

Conduction

Conduction Through a Plane Wall

For steady state, unidirectional flow of heat through a homogeneous plane wall, Fourier's equation gives the heat by conduction as:

$$Q = \frac{kA(t_1 - t_2)}{x}$$

Bradshaw,2013-11-11 This book is designed to accompany Physical and Computational Aspects of Convective Heat Transfer by T Cebeci and P Bradshaw and contains solutions to the exercises and computer programs for the numerical methods contained in that book Physical and Computational Aspects of Convective Heat Transfer begins with a thorough discussion of the physical aspects of convective heat transfer and presents in some detail the partial differential equations governing the transport of thermal energy in various types of flows The book is intended for senior undergraduate and graduate students of aeronautical chemical civil and mechanical engineering It can also serve as a reference for the practitioner *Engineering Heat Transfer* Donatello Annaratone,2010-03-14 This book is a generalist textbook it is designed for anybody interested in heat transmission including scholars designers and students Two

criteria constitute the foundation of Annaratone's books including the present one. The first one consists of indispensable scientific rigor without theoretical exasperation. The inclusion in the book of some theoretical studies even if admirable for their scientific rigor would have strengthened the scientific foundation of this publication yet without providing the reader with further applicable know-how. The second criterion is to deliver practical solutions to operational problems. This criterion is fulfilled through equations based on scientific rigor as well as a series of approximated equations leading to convenient and practically acceptable solutions and through diagrams and tables. When a practical case is close to a well-defined theoretical solution, corrective factors are shown to offer simple and correct solutions to the problem.
