Lecture Notes for Linear Algebra Gilbert Strang, Lecture Notes for Linear Algebra provides instructors with a detailed lecture by lecture outline for a basic linear algebra course The ideas and examples presented in this e book are based on Strang s video lectures for Mathematics 18 06 and 18 065 available on MIT s OpenCourseWare ocw mit edu and YouTube youtube com mitocw Readers will quickly gain a picture of the whole course the structure of the subject the key topics in a natural order and the connecting ideas that make linear algebra so beautiful *Catalog of the U.S. Military Academy* Military Academy, West Point, *Catalogue* United States Military Academy,1968 *Catalog of Information* United States Military Academy,1946 Lecture Notes on Linear Algebra Wai-chee Shiu,Chuan I. Lecture Notes on Linear Algebra David Lerner,2008 **The Linear Algebra a Beginning Graduate Student Ought to Know** Jonathan S. Golan,2012-04-23 Linear algebra is a living active branch of mathematics which is central to almost all other areas of mathematics both pure and applied as well as to computer science to the physical biological and social sciences and to engineering It encompasses an extensive corpus of theoretical results as well as a large and rapidly growing body of computational techniques Unfortunately in the past decade the content of linear algebra courses required to complete an undergraduate degree in mathematics has been depleted to the extent that they fail to provide a sufficient theoretical or computational background Students are not only less able to formulate or even follow mathematical proofs they are also less able to understand the mathematics of the numerical algorithms they need for applications Certainly the material presented in the average undergraduate course is insufficient for graduate study This book is intended to fill the gap which has developed by providing enough theoretical and computational material to allow the advanced undergraduate or beginning graduate student to overcome this deficiency and be able to work independently or in advanced courses The book is intended to be used either as a self study guide a textbook for a course in advanced linear algebra or as a reference book It is also designed to prepare a student for the linear algebra portion of prelim exams or PhD qualifying exams The volume is self contained to the extent that it does not assume any previous formal knowledge of linear algebra though the reader is assumed to have been exposed at least informally to some of the basic ideas and techniques such as manipulation of small matrices and the solution of small systems of linear equations over the real numbers More importantly it assumes a seriousness of purpose considerable motivation and a modicum of mathematical sophistication on the part of the reader In the latest edition new major theorems have been added as well as many new examples There are over 130 additional exercises and many of the previous exercises have been revised or rewritten In addition a large number of additional biographical notes and thumbnail portraits of mathematicians have been included **Lecture Notes on Linear Algebra**
