Robust Statistics Through the Monitoring Approach Anthony C. Atkinson, Marco Riani, Aldo Corbellini, Domenico Perrotta, Valentin Todorov, 2025-07-26 This open access book presents robust statistical methods and procedures through the monitoring approach with an emphasis on applications to linear regression Illustrating the theory it explores both large and small sample properties The performance of the forward search and of the monitoring of static robust estimators for regression data are illuminated through numerous data analyses using MATLAB and R The book describes the results of many years work of the authors in the development of powerful methods of robust regression analysis Robust methods are designed to analyse contaminated data The well established static robust methods estimate model features such as parameter estimates assuming the amount of contamination in the data is known These methods are described in detail in Chapter 2 for estimation in a simple sample The extension to regression is presented in Chapter 3 with an emphasis on S estimation and related procedures as well as on least trimmed squares The monitoring

methods of Chapter 4 including the forward search find the appropriate level of robustness for each data set and so avoid biased estimation from the inclusion of outliers and inefficiency due to the deletion of uncontaminated observations This analysis is followed by examples which illustrate the use of the interactive graphical analyses associated with the authors FSDA toolbox Numerical comparisons of the size and power of outlier tests appear in Chapter 5 Later chapters illustrate applications to response transformation in regression and to non parametric regression Extensions of the robust multiple regression model include Bayesian heteroskedastic time series and compositional regression together with the clustering of regression models Finally several approaches to model selection are investigated and robust analyses of regression data are presented that illustrate the use of the techniques introduced earlier Exercises are given at the end of each chapter with solutions at the end of the book The MATLAB code can be reproduced using MATLAB Online without the need for a license or via the language agnostic Jupyter notebook environment after installing the MATLAB kernel Online computer code is available for all examples and exercises together with a series of YouTube videos Aimed at professional statisticians and researchers concerned with insightful data analysis as well as postgraduate students the book may also serve as a text for a modern interactive robust regression course

Developing an Effective Construction Training Program for American Supervisors with Hispanic Craft Workers Edna Vanessa Vázquez,2005 In the construction industry Hispanics have the highest rate of fatal work injuries among the racial ethnic groups and productivity in the field is limited by the language barrier between Hispanic workers and their supervisors and the level of education of many Hispanic craft workers This research developed a training program designed to facilitate the integration process between American supervisors and Hispanic craft workers in a practical and cost effective way thus improving productivity and lowering fatality rates The Iowa State University research team conducted a survey of 38 American supervisors representing 14 Iowa construction companies Survey results confirm that communication is the main problem experienced by American supervisors in the job site Many American supervisors also use or depend on a link person an individual who interprets tasks to the rest of the Hispanic crew to communicate to the Hispanic crew members Research findings show that language differences affect productivity and workplace safety in the construction industry Additionally the educational levels of Hispanic workers indicate that they may not have the literacy skills necessary to understand training materials This research developed two training courses designed to expand the Spanish communication skills of American supervisors The research team modified the English as a second language course developed in Phase I into the Spanish as a Second Language SSL Survival Course A series of technical training courses were also developed titled Concrete Pavement Construction Basics CPCB that cover general practices in concrete pavement construction They are much shorter and more specialized than the SSL course The CPCB courses provide American supervisors simple and practical communication tools on a variety of topics to choose from according to their specific needs
